

INTEGO® Solo

A seed treatment that controls pythium in all labelled crops, phytophthora in soybeans, and suppresses aphanomyces root rot in field peas and lentils.

Registered crops

- Chickpeas
- Dry beans
- Field peas
- Lentils
- Soybeans

Diseases controlled

- Early season root rot caused by *Phytophthora sojae*
- Pythium seed rot/damping off
- Suppression of aphanomyces root rot

Benefits

- **PROTECTION** of the entire root system – with a unique mode of action that creates a complete zone of defense under ground
- **WIDER SPECTRUM** of protection against more species of pythium and phytophthora than metalaxyl alone
- **USER-FRIENDLY TREATMENT** – smooth flowability and low-use rate ensures a consistent, even application and easy treatment experience
- Systemic action protects against early season seed rots, seedling blights and longer term infections of plants
- Group 22 active is the only non-Group 4 mode of action available for pythium control

Application tips

- For on-farm use and in commercial seed treating systems
- Must be tank-mixed with a product labelled for complete protection against *Fusarium* and *Rhizoctonia* spp., as well as other fungal pathogens
- No colourant is included in INTEGO Solo, and seed treated with INTEGO Solo must be conspicuously coloured
- Compatible with most liquid inoculants – always check with inoculant suppliers for specific details and treating instructions

ACTIVE INGREDIENT

- > Group 22 (ethaboxam)

APPLICATION

- > No colourant – add dye or tank-mix with another seed treatment

TREATMENT AREA

- > One jug treats 709 bushels of peas, lentils and soybeans

NOTES

- > INTEGO Solo has a very low application volume and does not prevent other seedling diseases such as fusarium and rhizoctonia. As such, INTEGO Solo should always be applied in combination with another seed treatment registered to control these diseases.
- > Research has indicated a link between aphanomyces and fusarium root rot infection. It is imperative that both diseases be controlled to limit root rot in susceptible crops.
