

## 2021 Nufarm supported tank-mixes under PMRA tank-mix policy

The Pest Management Regulatory Agency (PMRA) maintains their position regarding the use of unlabeled tank-mixes of commercial class pest control products used for crop production or vegetation management after discussion with CropLife Canada and growers' groups. Application of unlabeled tank-mixes is permitted if both products are registered and being applied within their registered use pattern (application rate, application timing, number of applications per season, pre-harvest interval, pest claim, etc.). This policy includes both on-farm and commercial seed treatments.

Users of commercial class pest control products used for crop production are permitted to apply unlabeled tank-mixes of registered pest control products, subject to the following conditions:

1. The tank-mix partner is registered for use in Canada on the targeted crop, including genetically modified crops.
2. The tank-mix only includes an adjuvant, when specifically required by one of the tank-mix partner labels. If an adjuvant is not required on the label of any tank-mix partner, then no adjuvant may be added to the tank-mix.
3. The application timings of all tank-mix partners are compatible with crop and pest staging.
4. Each tank-mix partner is applied in accordance with its registered product label (including directions for use, precautions, buffer zones, etc.). In cases where information on the tank-mix partner labels differs between them, the most restrictive directions must be followed.
5. The tank-mix is not specifically excluded or contraindicated on either tank-mix partner label.
6. The use of the tank-mix provides additional value to the user including increased scope of pests controlled, contributes to resistance management or integrated pest management, cost or time savings.

### What will Nufarm support under this tank-mix policy?

Nufarm will support the unregistered tank-mixes that are listed in this document, and tank-mixes that are included on Nufarm product labels. If a tank-mix is not listed, then anyone who applies or recommends an unlabeled mix does so at their own risk and liability. A farmer is free to apply mixes within the scope of the policy but are liable should any problems be encountered. Should farmers, crop advisors, agronomists, retailers or provincial extension staff make tank-mix recommendations that are not registered nor supported by Nufarm, they are assuming the liability.

Always read and follow all label directions. For products and combinations not listed please contact your local Nufarm representative or call **1-800-868-5444**.

Product labels and SDS sheets can be found at [www.nufarm.ca](http://www.nufarm.ca).
