

2026 Nufarm compliant tank-mixes under PRD tank-mix policy

In 2020, the Pest Management Regulatory Agency (PMRA, now Pesticides Regulatory Directorate, PRD) published new guidance around tank mixing pest control products. The new guidelines state that in order for tank mixing to be permitted, there must be text on the product labels that specifically allows for tank mixing in the form of the **new** tank mix statement or a specific tank mix recommendation. In addition, both products must be registered and applied within their registered use pattern (targeted crop, application rate, application timing, number of applications per season, pre-harvest interval, pest claim, etc.). This new policy came into effect as of December 2025.

Pesticide labels in Canada must now include language that either restricts tank mixing to only those products specifically listed on the label, or else allows tank mixing by containing the general tank mix statement:

"This product may be tank mixed with (a fertilizer, a supplement, or with) registered pest control products, whose labels also allow tank mixing, provided the entirety of both labels, including Directions For Use, Precautions, Restrictions, Environmental Precautions, and Spray Buffer Zones are followed for each product. In cases where these requirements differ between the tank mix partner labels, the most restrictive label must be followed. Do not tank mix products containing the same active ingredient unless specifically listed on this label.

In some cases, tank mixing pest control products can result in reduced pesticide efficacy or increased host crop injury. The user should contact [insert registrant name] at [insert contact information] for information before applying any tank mix that is not specifically recommended on this label."

Anyone applying an off-label mix assumes liability for any issues that may arise. While end-users may apply tank mixtures using the general tank mix statement, provided they fall within the scope permitted by the new tank mix policy, it is important to note that not all combinations have been tested by the manufacturer for efficacy or crop tolerance. **It is strongly recommended that end-users consult the manufacturer prior to use.**

The following tank mix options comply with current guidance at the time of publication and are supported by Nufarm. If a tank mix is not explicitly listed, any individual who applies or recommends an unlabeled mix does so at their own risk and assumes all associated liability. This includes farmers, crop advisors, agronomists, retailers, and provincial extension staff.

Always read and follow label directions.
