

CONTROL BRUSHWEEDS AND PASTURE WEEDS WITH ONE PRODUCT.

Nufarm

Grow a better tomorrow.

CONTROL BRUSHWEEDS AND PASTURE WEEDS WITH ONE PRODUCT... AND KEEP YOUR COSTS DOWN TOO.

Conquest® provides

- Proven, grass friendly formulation that is suitable for both pasture and brushweeds
- Ideal for spot, hand gun and aerial application
- Cost effective
- Fast acting
- Easy to mix, low odour liquid

Reliable and fast acting

Conquest is a fast acting contact herbicide for brushweeds and large, multicrowned or hard to control broadleaf pasture weeds.

Conquest contains 100g/L picloram and 300g/L triclopyr as an emulsifiable concentrate (EC). **Conquest** is ideal for aerial, handgun and spot application and will safely control a wide range of brushweeds and pasture weeds including gorse, blackberry, ragwort, fleabane and thistles.

One low cost solution for all hard to kill weeds

Conquest's wide weed spectrum means it's the only product you need in the shed to control all common brushweeds and hard to kill pasture weeds.

Grass friendly formulation

Conquest is safe on grasses so you won't have brown patches in your pasture after spraying. This makes it easier to maintain your current pasture species without having to re-grass.

See results fast

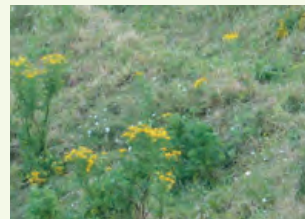

Unlike other alternatives, sprayed weeds rapidly show signs of spraying and full brownout can occur within weeks.

Suppresses weed germination

Conquest has short term residual soil activity which will suppress weeds that try to germinate around the area that has been treated. The length of time that residues persist will vary according to site conditions, climate and the application rate.

Easy to mix formulation

Conquest is a low odour liquid formulation. One common rate for all knapsack spraying makes preparing the spray solution simple.

Large flowering ragwort

Conquest-treated ragwort 5 days after application

Conquest-treated ragwort 39 days after application

Getting the best out of Conquest

Application timing

Conquest is absorbed through roots, stems and leaves, therefore it's important that target weeds are actively growing at the time of application. When the plants are actively growing the active ingredients are translocated to the growing points of the plant sooner resulting in a faster brown out.

Rainfastness

Do not apply if rain is likely within three hours of application.

Adjuvants

When targeting harder to kill weeds such as gorse it is recommended that Pulse® Penetrant is added at a rate of 100mL per 100L of water to increase coverage and uptake.

Mixing and compatibility

When mixing, add Conquest to a partially filled tank and add the remainder of the water. Pulse Penetrant, where recommended, should be added last to minimise foaming. Agitate thoroughly while filling and spraying. Conquest is compatible with most other commonly used herbicides.

Clover re-establishment

As Conquest has some residual soil activity, application may prevent the re-establishment of clover in the short term. The length of residual activity is dependent on many factors including climate and application rate.

PASTURE WEEDS – SPOT APPLICATION

| Weed | Knapsack or battery powered motorbike sprayer mL/10 Litres | High volume gun and hose mL/100 Litres | Notes |
|---|--|--|---|
| Ragwort and thistles (excluding Californian thistle) | 60 | 200 | Rosette and multi crowned plants |
| | | 250 | Early flowering plants |
| Fennel, goats rue, hemlock, horehound, inkweed, nettles | 60 | 250 | Apply during active growth from full leaf to early flowering. |
| Alligator weed, field bindweed, Californian thistle, Cape weed, docks, sorrel | 60 | 300 | Californian thistle – retreatment may be required |

Note: For low growing plants like ragwort and thistles use a handgun with a No. 4 tip at 500kPa. For larger semi-woody type plants eg. Inkweed, fennel, use a handgun with a No. 4 tip at 1000-2000kPa.

Conquest is also suitable for use in carpet weedwipers and as a broadcast application. Refer to the product label for details.

Conquest-treated nodding thistle 13 days after application

Conquest-treated nodding thistle 48 days after application

BRUSHWEEDS

| Weed | Rate | | Notes |
|--------------------------|--------------------|----------------|---|
| | Handgun mL/100L | Aerial L/Ha | |
| Blackberry | 500-650 | 10 | Apply during summer and early autumn when bushes are actively growing. Use the high rate on hard-grazed and lower growing types on the East Coast of the North Island and in Northland. |
| Broom | 250 | 10 | Ground: Apply during periods of active growth from November to February. When plants are slow growing or stressed (cold, drought, dusty, or salt sprayed conditions), use the higher rate and add Pulse 100mL/100 Litres to reduce variability. Follow-up treatment may be required. Aerial: Apply November to February to actively growing bushes. Add Pulse 2L/ ha to improve results on gorse. Do not treat hard-grazed or scattered bushes by air. Best results are achieved when treating bushes less than 3m high, with stems less than 3cm diameter. Follow-up treatment may be required. |
| Gorse | 250-300 | | |
| Lupin | 100 | 2 | |
| Matagouri | 500 | 12 | Treat when in full flower during November to December. Best control is obtained when moist spring conditions favour growth. Reduced results may occur under dry conditions or where lichens impede chemical uptake. |
| Sweet Brier | 300-500 | 12 | Apply November to January. Ensure thorough wetting of the crown when gun spraying. Aerial application is enhanced when bushes are less than 2m high. |
| Tutu | 300 | 10 | Apply to fresh regrowth after frond expansion. |
| Woolly nightshade | 250 | 10 | Apply during active growth. Use Pulse to improve coverage. |

Blackberry

Gorse

Knapsack: Use 6mL per Litre of water.

Mistblower: Use 100mL per 10 Litres. For ULV use 500mL per 10 Litres, with a No. 3 or No. 4 hole.

Conquest Is also suitable for stump swabbing and stem cut/injections application.

See the product label for application details.

Powerful rewards for loyalty to Nufarm

Every purchase of Conquest earns you valuable reward points in Priority Partnership®, the rewards programme for New Zealand farmers. If you would like to know more about becoming a member visit www.prioritypartnership.co.nz
