GHS CLASSIFICATION

Acute oral toxicity Category 4, Serious eye damage Category 1, Skin sensitisation Category 1, Specific target organ toxicity (repeated exposure) Category 1, Hazardous to soil organisms, Hazardous to terrestrial vertebrates, Hazardous to the aquatic environment chronic Category 2

This product must not be used for any purpose, or in any manner, contrary to this label unless authorised under appropriate legislation.

DANGER

- Harmful if swallowed.
Causes liver or kidney damage from repeated oral exposure at high doses.
May cause an allergic skin reaction.
- Causes serious eye damage.
- Toxic to aquatic life with long lasting effects. Do not apply Sprinter 700 DS onto or into water. Avoid contamination of any water supply with empty container. Take all reasonable steps to ensure that the substance does not cause any significant adverse effects to the environment beyond the application area.
- Very toxic to soil environment. Selective herbicide – very toxic to some plant species.
Beware: Spray drift hazard. Apply this product carefully. Spray drift may cause serious damage to other desirable plants. Ensure compliance with relevant regional air management plans. Take all reasonable steps to ensure that the substance does not cause any significant adverse effects to the environment beyond the application area. To minimise the risk of damage from drift of this product, use low drift nozzles which minimise the production of small droplets (less than 100 microns).

Application Method	Droplet Size	Reference
Aerial	No finer than coarse	BCPC or ASABE S572
Boom	No finer than medium	BCPC or ASABE S572

Maintain a water rate of at least 30L/ha for aerial spraying. Do not add additional wetter unless specified on the label. Preferred wind conditions for spraying are a light constant breeze away from any sensitive crop.

- Toxic to terrestrial vertebrates.

HANDLING PRECAUTIONS

The person mixing or applying Sprinter 700DS must be a “Qualified Contractor” or a “Qualified Person”. The spray mixture may also be prepared by a “Qualified Loader”.

STORAGE

- Store in original container tightly closed and in a locked, dry, well ventilated, cool area away from foodstuffs, seeds, and fertilizers. Storage must be in accordance with NZS 8409 Management of Agrichemicals.
- Stores containing 100L of Sprinter 700DS require signage, 1000L require secondary containment, and more than 1000L require emergency response plans.

PERSONAL PROTECTION

- Avoid contact with skin or eyes and inhalation of spray mist.
- Use only outdoors or in well-ventilated area. When handling or if re-entry work is required within 24 hours of application wear eye protection, waterproof gloves, boots and overalls. Do not eat, drink or smoke while using. Remove protective clothing and wash hands and face thoroughly after handling. Wash protective clothing daily after work. Contaminated clothing should not be allowed out of the workplace.

EQUIPMENT

- Apply using well maintained spray equipment that is accurately calibrated to apply 100-300L of water/ha for ground spraying and 30-100L of water/ha for aerial spraying. Use higher water rates for larger weeds.

DISPOSAL

- Triple rinse empty container and add rinsate to the spray tank. Recycle empty container. Otherwise crush and bury in a suitable landfill.
- Dispose of product only by using according to the label, or at an appropriate landfill.

First Aid: If medical advice is needed have the product container or label at hand. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. For advice contact the National Poisons Centre 0800 POISON (0800 764 766) or a doctor immediately. IF ON SKIN: Wash with plenty of water. If skin irritation or rash occurs get medical advice/attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. IF INHALED: Remove to fresh air and keep at rest in a position comfortable for breathing. Call doctor if you feel unwell.

Spillage: Collect spillage. Wear appropriate protective clothing and prevent material from entering waterways. Absorb spill with inert material and place in waste containers. Wash area with water and absorb with further inert material. Dispose of waste safely in an approved landfill.

Transport: Do not carry this product on a passenger service vehicle.

Record Keeping: Records, as described in NZS 8409 Management of Agrichemicals, must be kept whenever Sprinter 700DS is used.

Mixing: Pour the measured quantity of Sprinter 700DS into the partially filled spray tank and with the agitator running top up with the remainder of the water. Keep agitated during use.

Cleaning: Flush equipment thoroughly with clean water after use. Decontaminate before using on plants that are sensitive to 2,4-D.

Decontamination: After thoroughly washing the tank and flushing the system with clean water, quarter fill the tank, add 500g of an alkali detergent and circulate throughout the system for 15 minutes. Drain the system. Remove the filters and nozzles and clean them separately. Then flush the system with clean water and allow to drain.

Compatibility: Sprinter 700DS is compatible with most other agricultural chemicals, including Associate[®] 600WDG, Archer[®] 750, Valdo[®] 800WDG, Kamba[®] 750 and Bonza[®] Gold.

Resistant Weeds Warning: Resistance to this herbicide could develop from excessive use. To minimise this risk use strictly in accordance with label instructions. Sprinter 700 DS contains a **GROUP 4 HERBICIDE** and belongs to the phenoxy group of chemistry. Sprinter 700DS has the disruption of plant cell growth mode of action. Naturally occurring weed biotypes, resistant to Sprinter 700DS and other phenoxy herbicides, are known to exist. Species with known resistant biotypes include nodding thistle, giant buttercup and slender winged thistle. Resistant individuals can eventually dominate the weed population if these herbicides are used repeatedly. Resistant weeds will not be controlled by Sprinter 700DS or other phenoxy herbicides. To prevent or delay the development of resistance use Sprinter 700DS in tank mixtures where appropriate and/or in rotation with herbicides having a different mode of action against the weed. Consult www.resistance.nzpps.org/ for alternative modes of action and details of resistance management strategies (if any).

General Comments:

Sprinter 700DS will control a wide range of pasture weeds, including thistles and ragwort. Weeds are best controlled as small seedlings. Use the lower rate on seedlings and the higher rate on larger weeds, or during periods of hardened growth. Do not apply if crop or weeds are stressed. Weed control may be unsatisfactory where low soil temperatures inhibit plant growth. Larger plants and established biennials are often not well controlled, and perennial plants are not well controlled. Sprinter 700DS is damaging to clovers, especially red, suckling and subterranean clover, and plantain and chicory. To minimize clover damage where clovers are actively growing, hard graze to remove as much clover leaf as possible then leave for a few days to freshen up before spraying. DO NOT spray hay or silage paddocks. DO NOT apply Sprinter 700 DS at more than 3.6 liters/ha or more than once per season.

After spraying with Sprinter 700DS, poisonous plants (eg. ragwort) may become more palatable. Stock should be kept away from the area until the plants have died down.

Buttercups and thistles are generally better controlled with Agritone[®] 750. Some weeds (eg. Californian thistle, bindweed) require repeat applications.

To improve control of large thistles, or phenoxy resistant thistles add Archer 750 at 40ml/ha. Archer 750 will severely suppress clover growth and clovers may take 6-12 months to recover.

Rainfall within 6 hours of application may reduce effectiveness.

Directions for Use:

It is an offence for users of this product to cause residues exceeding the relevant MRL in the Food Notice: Maximum Residue Levels for Agricultural Compounds.

CROP	RATE L/ha	NOTES
Wheat Barley Millet Ryecorn	1.2-1.8	Apply from 6 leaf stage to jointing (when nodes are visible at the base of the stem). Do not apply to wheat or barley between jointing and flowering. Rapidly growing spring sown cereals should be treated with Agritone 750. Critical comment: Application to crops outside recommended growth stages or crops stressed due to insect damage or moisture stress may cause serious injury including yield loss. Inspect crops before application to check condition and growth stage.
Oats	1.2	Use only on autumn sown oats and treat in the following spring when plants are fully tillered. Use Agritone 750 on spring sown oats.
Pasture (grass/clover)	1.8-3.6	Use 1.8L/ha for seedlings and small plants and 3.6L/ha for more mature plants. Treat seedling weeds in late autumn/early winter. Graze area to be treated to expose weeds and reduce clover leaf. Then leave for 1 week to freshen up before spraying. As treated weeds are more palatable to stock, avoid grazing for 7 days after spraying.

Weeds Controlled in Cereals:

At 1.2L/ha – fathen, hedge mustard, nettles, shepherd's purse, wild turnip.

At 1.8L/ha – black nightshade, calandrinia, docks (seedlings), thistles.

Checked at 1.8L/ha – chamomiles, cornbind, regrowth docks, fumitory, spurrey, stinking mayweed, willow weed, wireweed, yarrow, vetch. For best results use an alternative cereal herbicide.

Plant Back Periods: 2,4-D has soil activity which may be exacerbated by dry soil conditions. To ensure that susceptible species (e.g. brassicas, grasses, clovers) are not damaged by 2,4-D soil residues, do not plant for 4 weeks after application.

Aerial Application: Read Spray Drift Hazard section of this label.

High Volume Spot Treatment: Use 580ml/100L water with a pressure of 600-800kPa and a No. 4 tip and apply as a fine wetting spray. Spray marker dye can be used to identify treated plants.

Knapsack: Use 58ml/10L water
