PASTURE APPLICATIONS

Conquest®

Conquest provides a weed control option in new and established pasture. It's proven to be a grass-friendly formulation, ideal for spot, hand gun, ground and aerial application. Conquest is very damaging to clovers and other legumes.

Active ingredient

100 g/L picloram and 300 g/L triclopyr.

Formulation

Emulsifiable concentrate (EC).

Benefits

- Proven, grass friendly formulation.
- Ideal for spot, hand gun, ground and aerial application.
- Cost effective.
- Reliable and fast acting.
- Suppresses weed germination.
- Easy to mix, low odour liquid.

Withholding period

Not required. Poisonous species may become more palatable. Avoid grazing until these have died down.

Rainfastness

3 hours.

Mode of action

GROUP	4	HERBICIDE
-------	---	-----------

Application timing

Conquest is absorbed through roots, stems and leaves, therefore it's important that target weeds are actively growing at the time of application. When the plants are actively growing the active ingredients are translocated to the growing points of the plant sooner, resulting in a faster brown out.

Plant back periods

Conquest has short-term residual soil activity which will suppress weeds that may germinate around the area that has been treated. The length of time that residues persist will vary according to site conditions, climate and the application rate. Application may prevent the re-establishment of clover in the short term.

Compatibility

When mixing, add Conquest to a partially filled tank and add the remainder of the water. Pulse® Penetrant, where recommended, should be added last to minimise foaming. Agitate thoroughly while filling and spraying. Conquest is compatible with most other commonly used herbicides.

Application and use rates

CROP	RATE	COMMENTS
Pasture	Spot spraying – Knapsack: 60 mL/10 L Hand gun: 200–300 mL/100 L	Use a handgun spraying pressure of 1000–2000 kPa. Ensure complete coverage of both foliage and stems.
	Broadcast application – 2 L/ha in 150–200 L water	Apply to heavy infestations only. Clovers and other legumes will be controlled or severely suppressed.

Weeds controlled

For full use directions including weeds controlled or suppressed please refer to the product label.

APPLICATION METHOD	WEEDS CONTROLLED	RATE	COMMENTS
Knapsack or battery powered motorbike mounted sprayer	Ragwort and thistles (excluding Californian thistle)	60 mL/10 L	Rosette and multi crowned plants.
	Fennel, goats rue, hemlock, horehound, inkweed, nettles	60 mL/10 L	Apply during active growth from full leaf to early flowering.
	Alligator weed, field bindweed, Californian thistle, Cape weed, docks, sorrel	60 mL/10 L	Apply during active growth from full leaf to early flowering. Retreatment of Californian thistle may be required.
High volume hose and gun	Ragwort and thistles (excluding Californian thistle)	200 mL/100 L	Rosette and multi crowned plants.
		250 mL/100 L	Early flowering plants.
	Fennel, goats rue, hemlock, horehound, inkweed, nettles	250 mL/100 L	Apply during active growth from full leaf to early flowering.
	Alligator weed, field bindweed, Californian thistle, Cape weed, docks, sorrel	300 mL/100 L	Apply during active growth from full leaf to early flowering. Retreatment of Californian thistle may be required.
Broadcast application	Ragwort and thistles, Californian thistle, Cape weed	2 L/ha	Apply to heavy infestations only. Best results are achieved from application prior to flowering. Retreatment of Californian thistle may be required.
Carpet type weedwiper	Ragwort and thistles, Californian thistle	1 L/40 L	Ensure the wiper remains saturated while in use. Two passes in opposite directions are recommended. Retreatment of Californian thistle may be required.
Grass turf: sports grounds and recreational areas	Creeping oxalis, dandelion, hydrocotyle, Onehunga weed and other broadleaf weeds	2 L/ha	Do not use clippings from treated areas for six months after treatment.
