TURF APPLICATIONS

Conquest®

Conquest provides an excellent weed control option in grass turf. It's proven to be a grass friendly formulation, ideal for spot spraying and ground application. Conquest is very damaging to clovers and other legumes.

Active ingredient

100g/L picloram and 300g/L triclopyr.

Formulation

Emulsifiable concentrate (EC).

Benefits

- Proven, grass friendly formulation
- Ideal for spot and ground application
- Wide range of broadleaf weeds controlled
- Cost effective
- Reliable and fast acting
- Suppresses weed germination
- Easy to mix, low odour liquid.

Rainfastness

3 hours.

Mode of action

GROUP	4	HERBICIDE
-------	---	-----------

Application timing

Conquest is absorbed through roots, stems and leaves, therefore it's important that target weeds are actively growing at the time of application. When the plants are actively growing the active ingredients are translocated to the growing points of the plant sooner, resulting in a faster brown out.

Soil residue activity

Conquest has short term residual soil activity. While this will suppress weeds that may germinate in the treated area, it can also cause damage to desirable plants when absorbed by their roots. **DO NOT** spray within the root zone of trees, shrubs or any other desirable plants. The length of time that residues persist will vary according to site conditions, climate and the application rate.

Compatibility

When mixing, add Conquest to a partially filled tank and add the remainder of the water. Agitate thoroughly while filling and spraying. Conquest is compatible with most other commonly used herbicides.

Weeds controlled

For full use directions including weeds controlled or suppressed please refer to the product label.

Application and use rates

- **Spot spraying – knapsack or battery powered motorbike mounted sprayer:**
60ml/10L. Ensure complete coverage of both foliage and stems.
- **Broadcast application:** 2L/ha in 150–200L water.

APPLICATION METHOD	WEEDS CONTROLLED	RATE	COMMENTS
Knapsack or battery powered motorbike mounted sprayer	Ragwort and thistles (excluding Californian thistle)	60ml/10L	Rosette and multi crowned plants.
	Fennel, goats rue, hemlock, horehound, inkweed, nettles	60ml/10L	Apply during active growth from full leaf to early flowering.
	Alligator weed, field bindweed, Californian thistle, Cape weed, docks, sorrel	60ml/10L	Apply during active growth from full leaf to early flowering. Retreatment of Californian thistle may be required.
Broadcast application	Ragwort and thistles, Californian thistle, Cape weed, Creeping oxalis, dandelion, hydrocotyle, Onehunga weed and other broadleaf weeds	2L/ha	Best results are achieved from application prior to flowering. Retreatment of Californian thistle may be required. DO NOT spray within the root zone of trees, shrubs or any other desirable plants. DO NOT use clippings from treated areas for six months after treatment.
