Active Ingredient: Contains 680g/kg glyphosate as the mono-ammonium salt in the form of a water soluble granule.

For brushweed control and general weed control in agriculture, horticulture, industrial areas, forestry, recreational areas and aquatic situations.

Net: 10 kg

HAZARD CLASSIFICATION

6.1E, 8.3A, 9.1B

This product must not be used for any purpose, or in any manner, contrary to this label unless authorised under appropriate legislation.

TOXICITY
Warning - may be harmful if swallowed, inhaled or in contact with the skin.
CORROSIVE
Danger - this product is corrosive and causes serious eye damage.
ECOTOXIC
Toxic to aquatic life with long lasting effects.
Beware: Spray drift hazard. Apply this product carefully.

HANDLING PRECAUTIONS
Any application of WeedMaster Dry when used as an aquatic herbicide, must be under the personal control of a "Qualified Loader", "Qualified Contractor" or a "Qualified Person".
STORAGE
Store in original container tightly closed in a locked, dry, cool area away from foodstuffs, seeds and fertilisers.
PERSONAL PROTECTION
Do not get in eyes. Avoid contact with skin and avoid breathing spray mist.

EQUIPMENT
Apply using well maintained spray equipment that is accurately calibrated.
DISPOSAL
Ensure container is completely empty. Burn empty container if circumstances such as wind direction permit.
FIRST AID
If medical advice is needed, have the product container or label at hand.

SPILLAGE: Wear appropriate protective clothing and prevent material from entering waterways. Sweep up solids without creating dust. Contain and absorb liquid spills with inert material and place in waste containers.

Mixing and Compatibility: WeedMaster Dry mixes readily with clean water. Reduced results may occur if dirty water (e.g. from ponds), hard water containing calcium salts, or water containing metal ions (e.g. iron) is used.

GENERAL INFORMATION
It is an offence for users of this product to cause residues exceeding the relevant MRL in the Food Notice: Maximum Residue Levels for Agricultural Compounds.

WeedMaster Dry is a broad spectrum, non-selective, non-residual herbicide that is not volatile and may be used in agriculture, horticulture and for other uses including general weed control.

These effects are a gradual wilting and yellowing of the foliage which advances to deterioration of above and below ground parts.

Apply WeedMaster Dry only to healthy, actively growing plants with adequate leaves for herbicide uptake. Avoid treating plants that are drought affected, frost damaged, silt laden, or suffering the effects of previous herbicide application.

Post Treatment Management
A withholding period for grazing stock is not required (except where ragwort is present). It is, however, recommended that grazing treated plants is delayed for one day for annual weeds and three days for perennial weeds to ensure absorption and translocation of WeedMaster Dry.

RESISTANT WEEDS WARNING
Resistance to this herbicide could develop from excessive use. WeedMaster Dry contains a GROUP 6 HERBICIDE and belongs to the glycine group of herbicides.

USE RECOMMENDATIONS
Refer to "WEEDS CONTROLLED" section for rates of application.

General Weed Control:
Handgun - mix 0.5kg of WeedMaster Dry with 100 litres of water. Knapsack - mix 75g of WeedMaster Dry with 15 litres of water.

Brushweed Control: WeedMaster Dry may be used to control a wide range of brushweeds and woody plants.
Agricultural Areas: WeedMaster Dry may be used for the control of annual and perennial weeds as directed in agricultural land prior to sowing any edible or non-edible crop or pasture.

Pasture: Direct (Spot) Application. WeedMaster Dry is non-selective and may damage or kill any plant in the sprayed area. Retreatment and/or pasture improvement may be necessary to restrict seedling re-establishment.

Pasture Renovation: WeedMaster Dry may be used to control existing pasture species prior to re-seeding pasture or establishing other crops.

Pre-Harvest: Wheat, Barley, Oats, Peas.
For wheat, barley and oats - Apply 7-12 days prior to harvest when the grain moisture content is less than 30%.
Peas - Apply 7-14 days prior to harvest when the pods have dried.

Orchards/Vines: Citrus, Apples, Pears, Stonefruit, Kiwifruit, Grapevines.
Do not apply near unprotected trees or with wiper equipment. For long term control of annual weeds WeedMaster Dry may be tank mixed with a suitable residual herbicide.

Market Gardens: WeedMaster Dry can be applied before or after seeding and prior to crop emergence. WeedMaster Dry can be applied prior to transplanting or as a post harvest clean-up.

Asparagus: WeedMaster Dry can be applied:
- Following the final harvest and immediately after removal of all spears but before crop regrowth occurs.
- Prior to planting or crop emergence. Do not treat emerging spears.

Industrial and Non-Agricultural Areas: WeedMaster Dry can be used for the control of annual and perennial weeds as directed. For residual control WeedMaster Dry can be tank mixed with simazine or another suitable residual herbicide.

Turfgrass and Recreational Areas: Apply before establishing lawns, parks, reserves and ornamentals. WeedMaster Dry can also be applied around the base of established trees as a directed or shielded spray or by wiper equipment.

Aquatic Areas: Drains and Waterways. Ensure that 75% of the weed to be treated is above water level or efficacy may be reduced. Following spray application do not submerge the treated plant as this will cause the herbicide to be washed off.

Forestry: WeedMaster Dry can be applied for the control of grasses and a wide range of brushweeds. The addition of Pulse is required for the control of bracken and gorse. Do not allow spray, spray drift or the wiper surface to contact the foliage or green bark of desirable trees as severe injury can occur.

APPLICATION INSTRUCTIONS:
Ensure the equipment is in good operating order and correctly calibrated. Wash thoroughly with water before use, and ensure filters and nozzles are free of pesticide residue.

Boom Application: Water volumes up to 200 litres/ha of clean water are desirable. For broadcast boom application flat fan wide angle nozzles (e.g. 110") using pressures of 200-280 kPa are preferred.

Knapsack and Handgun Application: Adjust the equipment to achieve a fine spray. Use the minimum spray volume necessary to achieve uniform and complete coverage without run-off.

Wiper Application: Pre-mix 1 part of WeedMaster Dry and 4 parts of clean water. Mix only enough herbicide for immediate needs and allow the wiping area to become fully saturated before commencing.

Aircraft Application: WeedMaster Dry may be applied by aircraft in forestry and non-cropping areas only. Aerial application of WeedMaster Dry is not recommended on cropping land or near desirable plant species as even slight drift may cause severe injury or destruction.

Mistblower Application: Use a solution of 150g of WeedMaster Dry in 10 litres of water. For the micron attachment increase to 1kg of WeedMaster Dry in 10 litres of water. Provide complete coverage and spray to wet but not to run-off.

WEEDS CONTROLLED

Table with columns: WEED, Boom or Aerial kg/ha, Handgun kg/100 litres, Knapsack g/15 litres, Mistblower g/10 litres, CRITICAL COMMENTS. Lists various weeds and their control methods.

CONDITIONS OF SALE:

CAUTION: READ THIS NOTICE BEFORE OPENING THE CONTAINER

If you open this container you will be deemed to have accepted the conditions below.

The results from use of this product may be affected by factors beyond Nufarm's control, including mixing, use, climatic conditions, time of application, crop or crop stage and the possible development of resistance to the active ingredient, even though the product is reasonably fit for the purposes stated in this label.

When you use this product, you agree that neither Nufarm Limited nor any manufacturer of any component of the product will be liable for any damage, injury or loss including consequential loss which arises in any way from the storage, handling, or use of the product.
