THE GRASS AND BROADLEAF WEED SPECIALIST IN VEGETABLE CROPS.

- Pre-emergent selective herbicide
- Controls 27 different grass and broadleaf weeds
- Give your crop the best chance at establishment

Nufarm's Ramrod is a pre-emergent selective herbicide that provides residual control of a wide range of broadleaf and grass weeds for up to 6-8 weeks.

SPOT THE DIFFERENCE NUFARM'S RAMROD CAN MAKE FOR ONIONS

Untreated

Weeds present: groundsel, stinging nettle, muskweed, chickweed, fumitory, hogweed (wireweed)

Treated

Treated with Nufarm's Ramrod + Rifle

HOW TO GET THE MOST OUT OF NUFARM'S RAMROD

- Be sure to apply within a few days of the last tillage to a well-prepared soil surface, free of clods, trash and weed growth, otherwise germinating weeds will not be controlled.
- Apply in a minimum spray water volume of 200 L/ha.
- Tank mix with Nufarm's Dacthal® 900WG or Rifle® 440 for broader weed control.
- Apply at post transplanting stage (brassicas) or seeding (onions) prior to weed germination.
- Overhead irrigation or rainfall is needed as soon as possible after application (minimum 7–18 mm within 10 days).
- Refer to the APVMA PubCRIS database for PERMITS relating to Propachlor (Nufarm's Ramrod) usage.
- Avoid cultivation or physically incorporating as this can reduce efficacy.
