

TECHNOTE**COPPER SOLUTION FOR AVOCADOS
YOUR EDGE AGAINST DISEASE**

A LIQUID COPPER SOLUTION FOR THE CONTROL OF A WIDE RANGE OF FUNGAL AND BACTERIAL DISEASES ON HORTICULTURAL AND VITICULTURE CROPS.

DISEASE CONTROL

- Anthracnose
- Cercospora
- Sooty blotch
- Phytophthora (Stem Canker)

THE FACTS

Post harvest rots of avocados are a serious factor affecting both quality and storage life. Copper is a frequently used chemical in avocado orchards for disease control. Successful control depends on both an even distribution and good retention of the copper over all plant surfaces.

Using a high quality effective copper for the control of fungal pathogens is essential.

Liquicop is able to achieve this due to its unique formulation. With smaller particles, coverage is significantly improved which is key to achieving the best product performance possible.

PERFORMANCE

- Copper fungicide/bactericide
- Low copper rates
- Low blue residues
- Particle <0.3 micron
- Unique formulation maximises leaf coverage
- Non abrasive
- 100% soluble
- Excellent adhesion and rainfastness

PARTICLE SIZE = COVERAGE

Liquicop is 100% water soluble so it will pass through anything that pure water will penetrate.

The formulation allows Liquicop particles to be <0.3 micron compared to competitor copper hydroxide particles of 2.5 – 3.1 micron.

This small particle size results in Liquicop having more particles per gram. The product can cover up to 100 times more surface area than certain other coppers.
