CLINIC UP

MAPP 17893

A systemic herbicide for the control of broad-leaved and grass weeds in:

Asparagus
Barley
Durum wheat
Field beans
Forest
Grassland including grassland destruction.
Green cover in land not being used for crop production
Hard surface
Land immediately adjacent to aquatic areas.

Linseed
Mustard
Natural surfaces not intended to bear vegetation
Oats
Oilseed rape
Bulb Onion and leek
Orchards: apple, pear, cherry, damson and plum
Peas combining and vining
Permeable surfaces
Perlying soil
Pre-emergence of drilled crops
Stubbles of all edible and non-edible crops
Sugar beet
Swede
Turnip
Wheat

This product is a soluble concentrate containing 360 g/l glyphosate (acid equivalent)

The (COSHH) Control of Substances Hazardous to Health Regulations may apply to the use of this product at work

Contents 1 – 20 l

This label is compliant with the CPA Voluntary Initiative Guidance
Keep out of reach of children.
Avoid breathing dust/fume/gas/mist/vapours/spray.
Wear protective gloves/protective clothing/eye protection/face protection.
IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician.
IF ON SKIN: Gently wash with plenty of soap and water.
IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.

TO AVOID RISKS TO HUMAN HEALTH AND THE ENVIRONMENT, COMPLY WITH THE INSTRUCTIONS FOR USE.

IMPORTANT INFORMATION

FOR USE ONLY AS A PROFESSIONAL HERBICIDE AND DESSICANT

Crops/situations:
Winter Wheat, Winter Barley, Winter Oats, Spring Wheat, Spring Barley, Spring Oats, Durum Wheat, Oilseed rape and Linseed
Mustard
Combining Peas, Field Beans
Post planting and pre-emergence on listed Cereals, Oilseed rape, Combining Peas, Vining Peas, Field Beans, Mustard, Linseed, Sugar Beet, Swedes, Turnips, Bulb Onions and Leeks.
Asparagus
All edible crops (stubble), All non-edible crops (stubble)
Grassland
Natural surfaces not intended to bear vegetation, Permeable surfaces overlying soil, Hard surfaces
Land immediately adjacent to aquatic areas
All edible and non-edible crops (destruction, before sowing/planting)
Apple and Pear
Plum and Cherry
Green Cover on land not being used for crop production
Forest nursery, Forest

Full application details are given on the attached leaflet

READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.

CLINIC UP (New Product Application) CLINIC UP/1216

Nufarm UK Limited
SAFETY PRECAUTIONS

Operator protection
Engineering control of operator exposure must be used where reasonably practicable in addition to the following personal protective equipment:

- WEAR SUITABLE PROTECTIVE GLOVES when handling the concentrate and contaminated surfaces.
- WEAR SUITABLE PROTECTIVE CLOTHING (COVERALLS), SUITABLE PROTECTIVE GLOVES AND RUBBER BOOTS when using hand-held sprayers, hand-held rotary atomisers, weed-wiping or making cut stump treatments.
- WEAR SUITABLE PROTECTIVE CLOTHING (COVERALLS), SUITABLE PROTECTIVE GLOVES, RUBBER BOOTS AND FACE PROTECTION (FACESHIELD) when making stem injection treatments.

However, engineering controls may replace personal protective equipment if a COSHH assessment shows they provide an equal or higher standard of protection.

- WASH CONCENTRATE from skin or eyes immediately.
- DO NOT BREATHE SPRAY.
- WASH ALL PROTECTIVE CLOTHING thoroughly after use, especially the insides of gloves.
- WASH HANDS AND EXPOSED SKIN before eating, drinking or smoking and after work.

Environmental protection
Do not contaminate water with the product or its container* (Do not clean application equipment near surface water / Avoid contamination via drains from farmyards and roads). *except when used as directed
The maximum concentration of glyphosate in the water must not exceed 0.2 ppm or such lower concentration as the appropriate regulatory body may require.
Livestock must be kept out of treated areas IF RAGWORT IS PRESENT, FOLLOW THE GUIDANCE IN THE ‘DIRECTIONS FOR USE’.

Storage and disposal
KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDING STUFFS. KEEP OUT OF REACH OF CHILDREN.
KEEP IN ORIGINAL CONTAINER, tightly closed, in a safe place.
WASH OUT CONTAINER THOROUGHLY empty washings into spray tank, and dispose of safely.
To avoid risks to human health and the environment, comply with the instructions for use.
Safety data sheet available for professional user on request.

CLINIC UP (New Product Application) CLINIC UP/1216
Nufarm UK Limited
This product is approved under The Plant Protection Products Regulations (as amended).
DIRECTIONS FOR USE

IMPORTANT: This information is approved as part of the Product Label. All instructions within this section must be read carefully in order to obtain safe and successful use of this product.

GENERAL INFORMATION

CLINIC UP is a foliar acting herbicide which controls annual and perennial grasses and most broad-leaved weeds when used as directed. It is translocated from treated vegetative growth to underground roots, rhizomes or stolons. Leaf symptoms, being a reddening then yellowing of the foliage, are first seen on grass weeds but take longer to appear on broad-leaved weeds.

It is particularly important that the weeds have sufficient leaf growth and are actively growing when treated.

The majority of perennial broad-leaved weeds are most susceptible if treated when they are actively growing and are at or near flowering stage.

Annual weeds should be actively growing with grasses having at least 5 cm (2") of leaf and broad-leaved weeds at least two expanded true leaves when sprayed.

Couch/scutch grasses and other grass and broad-leaved weeds are less susceptible to CLINIC UP when growth is restricted by drought, waterlogging, frost, very high temperatures or natural dieback. Efficacy will be reduced if such conditions occur at or immediately after spraying.

Occasionally a slight check to crop growth may occur, particularly after direct drilling when crop seeds germinate amongst a mass of decaying foliage, stolons, rhizomes or roots. Thorough cultivations are necessary to disperse or bury decaying organic matter. Consolidate loose soils and ensure crops are adequately fertilised and appropriate measures are taken to prevent insect and fungal damage to the following crop, especially where following grassland.

Do not apply lime, fertiliser, farmyard manure, pesticides or similar materials within 7 days of CLINIC UP.

Note: CLINIC UP does not give acceptable control of horsetail, Equisetum arvense. Repeat treatment will be necessary.

WEATHER CONDITIONS

A period of at least 6 hours and preferably 24 hours free of rain must follow spraying. Do not spray onto weeds suffering from drought stress as reduced control may occur. Do not spray in windy conditions as drift onto other crops or vegetation.
can cause severe injury or destruction. Do not spray during frosty weather that prevents active growth and can induce weed senescence.

**Other specific restrictions:**

1. The total dose applied to green cover on land not being used for production must not exceed 6 L product/ha/year.
2. Users must consult the appropriate water regulatory body (Environment Agency/Scottish Environment Protection Agency) before using the product near water and must obtain their agreement before using this product to control aquatic weeds.
3. When applying through rotary atomisers, the spray droplet spectra produced must be of minimum Volume Median Diameter (VMD) of 200 microns.
4. For stump application, the maximum concentration must not exceed that produced by 200 ml product made up to 1 litre with water (20% v/v).
5. Weed-wipers may be used in any crop where the wiper does not touch the growing crop. The maximum concentrations used must not exceed the following (a) Weedwiper Mini – 1:2 dilution with water (b) Other wipers – 1:1 dilution with water.

**READ THE LABEL BEFORE USE. USING THIS PRODUCT IN A MANNER THAT IS INCONSISTENT WITH THE LABEL MAY BE AN OFFENCE. FOLLOW THE CODE OF PRACTICE FOR USING PLANT PROTECTION PRODUCTS.**

<td>• If after mid-November, wait for perennial grass leaves to turn red/yellow before cultivating.</td>
<td></td>
</tr>
</tbody>
</table>
Spray when weeds are actively growing as for autumn applications. Roots chopped by cultivations must show new leaf growth to be killed.

- Cultivate as required.
- Leave for regrowth to appear - allow a minimum 21 days weed growth before spraying.

After spraying:
Wait at least 5 days before cultivating. Retreatment may be necessary pre-harvest or in autumn as emergence in spring may be incomplete.

on the long term control of couch/scutch grass is not known.

</tbody>
</table>

**GRASSLAND INCLUDING GRASSLAND DESTRUCTION**

| Weeds Controlled: | Annual grasses and broad-leaved weeds. Annual and perennial broad-leaved weeds. |
| Crops: | Any crop to follow application |

<table>
<thead>
<tr>
<th>Time</th>
<th>Method</th>
<th>Application rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spray when grasses and weeds are actively growing at the following times and growth stages: Annual grasses and annual broad-leaved weeds: • Spring, summer or autumn. • Annual grasses have at least 10cm (4”) of green leaf. • Annual broad-leaved weeds have at least 2 expanded true leaves. Perennial grasses and perennial broad-leaved weeds: • Mid to late summer.</td>
<td>Lightly cut or graze and allow regrowth for about 4 weeks until the recommended growth stages are reached. • Spray at the dose rate recommended for the weed or grass type. • Wait at least 5 days, when the leaves become yellowed, before removing the growth for conservation or by grazing as required, prior to cultivating or drilling. • Surface mats of old grassland must be thoroughly broken by cultivations before reseeding - see also GENERAL INFORMATION and CULTURAL ADVICE</td>
<td>1-2 years old, only annual weeds and grasses: 3 l/ha 2-4 years old, with perennial grasses: 4 l/ha Long leys e.g. 4-7 years old with perennial broad-leaved weeds: 5 l/ha Permanent grassland with ragwort or predominantly fine-leaved grasses: 6 l/ha Apply the recommended dose in 200-250 l/ha water.</td>
</tr>
</tbody>
</table>
- Perennial grasses have at least 12cm (5") of leaf or 5 fully expanded leaves.
- Perennial broad-leaved weeds have substantial leaf area or are near flowering.

Where ragwort is present users should consult the Code of Practice on How to Prevent the Spread of Ragwort. Ragwort plants sprayed with this herbicide are more palatable and contain higher levels of toxins. Animals should be excluded from treated areas until any ragwort has completely recovered or died and there is no visible sign of the dead weed. Do not include treated ragwort in hay or silage crops.

### CULTURAL ADVICE

**Direct drilling of grass after a short-term ley**

Direct drilling may be practised after a short-term ley provided that all nutrient and lime deficiencies have been corrected and there is no surface trash.

**Sowing to grass after late-summer desiccation of long leys or permanent pasture with surface mats**

Either: defer seeding until the following spring to allow surface mats to decompose.

Or:

Apply 2.5 tonnes/ha (1 tonne/ac) of ground limestone to the surface mat not less than seven days after treatment followed by rotary cultivation to break the surface mat and incorporate the ground limestone into the soil. Seeding may be conducted as required thereafter provided that the surface mat has been completely broken down and the seeds will be in contact with mineral soil.

### GREEN COVER ON LAND NOT BEING USED FOR CROP PRODUCTION (SET-ASIDE)

**Weeds Controlled:** Common couch/scutch (*Elymus repens*).  Black bent (*Agrostis gigantea*).  Creeping bent (*Agrostis stolonifera*).  Annual grasses and broad-leaved weeds.  Volunteer cereals

**Crops:** Any crop to follow application

Users must ensure for themselves compliance with the management rules of any grant-aided scheme before use; the guidance given in the following may be changed.

<table>
<thead>
<tr>
<th>Time</th>
<th>Method</th>
<th>Application rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Spray whilst the green cover is actively growing at any time consistent with the prevailing weather conditions and within the management rules of any grant-aided scheme. Normally destruction of green cover cannot be started before 15 April and must be accomplished by 31 August. Deep-rooted perennial broad-leaved annual weeds and grasses except black-grass. 1.5 l/ha</td>
<td>Do not cut or cultivate prior to applying this product in this situation.  Spray before weeds set seed  After spraying do not cut, cultivate or prepare land for the next crop until permitted to do so by the management rules; in any event do not cut or cultivate for 1 day (after 1.5 l/ha) or 5 days (after 3-6 l/ha) after application.</td>
<td>Apply in 80-150 l/ha water for this dose rate. (note - if the green cover is dense and/or well established, use the higher dose of 3 l/ha in 150-250 l/ha water as for low-medium couch/scutch - see</td>
</tr>
</tbody>
</table>

WEED CONTROL IN STANDING CEREAL CROPS (PRE-HARVEST)

Weeds Controlled:
- Common couch/scutch (Elymus repens)
- Black bent (Agrostis gigantea)
- Creeping bent (Agrostis stolonifera)
- Perennial broad-leaved weeds

Crops:
- Wheat including durum wheat, and oats destined for milling or feed.
- Barley destined for malting or feed.

(Consult purchasers of crops grown on contract and prospective purchasers of malting grade barley before treatment)

DO NOT TREAT CROPS INTENDED FOR SEED.
DO NOT TREAT UNDERSOWN CROPS.

| Spray when the moisture content of the grain measures less than 30%. Target weeds must be green, actively growing and accessible to the spray. | Spray the crop and weeds overall. Use high clearance tractors with narrow wheels and crop dividers. Adjust boom height to maximise spray retention on the target weeds. | Annual weeds and grasses or low couch/scutch grass infestations up to 25 shoots/m²: 2 l/ha
Apply in 80-150 l/ha water for this dose rate
Low-medium couch/scutch grass infestations, up to 75 shoots/m²: 3 l/ha
Medium-high couch/scutch grass infestations, over 75 shoots/m²: 4 l/ha
Perennial broad-leaved weeds; other perennial grasses: 4 l/ha
Apply in 150-250 l/ha water. |

After spraying:
Wait at least 7 days before harvesting. Treated straw must be chopped and incorporated or removed, after which normal cultivations may be resumed. Treated straw may be used for feed and litter, but must not be used for horticultural purposes.

DETERMINATION OF HARVEST FOR WHEAT AND BARLEY (HARVEST MANAGEMENT)
(aided desiccation of the crop already in the ripening phase)

Crops
- Wheat, for milling and feed.
- Barley, for malting or feed.

(Consult purchasers of crops grown on contract and prospective purchasers of malting grade barley before treatment)

DO NOT TREAT CROPS INTENDED FOR SEED.
DO NOT TREAT UNDERSOWN CROPS.

### WEED CONTROL AND DESICCATION IN STANDING OILSEED RAPE, MUSTARD AND LINSEED (PRE-HARVEST)

**Weeds controlled**

- Common couch/scutch (*Elymus repens*)
- Black bent (*Agrostis gigantea*)
- Creeping bent (*Agrostis stolonifera*)
- Perennial broad-leaved weeds

**Crops**

- Oilseed rape, winter or spring.
- Mustard
- Linseed, winter or spring

The treatment is suitable only for uniform, evenly maturing crops proceeding to harvest in prime condition. **DO NOT TREAT CROPS INTENDED FOR SEED.**

**Time**  | **Method**  | **Application rate**
---|---|---
**Weed control/crop desiccation:**
Spray 2-3 weeks before harvest when the natural ripening of the seed is progressing and the moisture content of the seed measures less than 30%.
Target weeds must be green, actively growing and accessible to the spray.  | Spray the crop and weeds overall. Minimise crop damage by use of high clearance tractors with narrow wheels and crop dividers.  | Low-medium couch/scutch grass infestations up to 75 shoots/m² and crop desiccation:
3 l/ha  
After spraying:
Wait at least 8 days before harvesting mustard.  
Wait at least 14 days before harvesting Oilseed rape.  
Wait at least 14 days before harvesting linseed although up to 28 days may be necessary to achieve the required degree of desiccation.  
Direct combine harvest the crop when fit. Treated straw must be chopped and incorporated or removed, after  | Medium-high couch/scutch grass infestations over 75 shoots/m² and crop desiccation:
4 l/ha  
Perennial broad-leaved weeds; other perennial grasses and desiccation:
4 l/ha  |
which normal cultivations may be resumed.

Apply in 200-250 l/ha water.

## WEED CONTROL IN FIELD BEANS AND PEAS (PRE-HARVEST)

MIXING AND SPRAYING

Mixing
Pour the recommended quantity of CLINIC UP into the spray tank already half-filled with clean water and under agitation. Top up the tank with more clean water to the required level, whilst maintaining agitation. Spray out on the day of mixing.

Knapsack Sprayers
Add the recommended quantity of CLINIC UP to the knapsack spray tank approximately one-third filled with clean water. Agitate thoroughly with a clean rod or by shaking after replacing the lid until thoroughly mixed. Top up the tank with more clean water to the required level and agitate thoroughly before use. Spray out on the day of mixing.

DO NOT MIX, APPLY OR STORE CLINIC UP IN GALVANISED OR UNLINED MILD STEEL CONTAINERS OR TANKS.
KEEP TANKS WELL VENTED AND CLEAR OF ALL SOURCES OF IGNITION.

KNAPSACK RATE ESTIMATOR
Using standard nozzles appropriately calibrated, each litre will treat 40m² (250l/ha water)
The rate of product applied using a knapsack sprayer must be equivalent to the application rates authorised in the ‘Directions for use’ section of the label.

<table>

APPLICATION & SPRAY QUALITY
Conventional hydraulic sprayers
Knapsack sprayers
Prepared spray solution should be applied as a MEDIUM or COARSE spray (BCPC definition) at nozzle pressures not exceeding 2.5 bar. CLINIC UP is a systemic weedkiller and is active at low doses.
Always take extreme care to avoid spray drift. DO NOT SPRAY in windy weather or near to desirable species or amenity plants as drift onto other crops or vegetation can cause severe plant injury or destruction.
**WICK/WIPER APPLICATORS (e.g. WEEDWIPER MINI)**

Certain weeds, particularly those with an erect growth habit and having a spatial separation from desirable species, can be effectively controlled by wiping a concentrated solution of CLINIC UP onto the leaves or stems. Weeds must be actively growing at application. Do not apply when rain is expected within 6 hours as, apart from unsatisfactory weed control, herbicide might be transferred to desirable species by rain splash or foliar contact.

**CLINIC UP dilution**

Maximum Concentrations used must not exceed the following:
- Weedwiper Mini: 1 volume CLINIC UP : 2 volumes of water
- Other wipers: 1 volume CLINIC UP : 1 volume of water for normal conditions; under warm, dry conditions use 1:2 dilution with water

Weedwipers may be used in any crop where the wiper does not touch the growing crop.
Note: for ease of identification of treated weeds, a suitable commercially available water soluble dye may be added to the prepared solution at 1 ml dye per 10 litres of prepared spray solution.

**Control of Bolters in Sugar Beet**

Treat by a series of three applications during early July to early August with 2 weeks between treatments; for high populations repeat each treatment after 24 hours in the reverse direction.

**CAUTION**

Ensure that there is a minimum 5 cm (2") between the top of the tallest desired vegetation and the impregnated wiper. Bolters should be a minimum 10 cm (4") taller than the desired vegetation for safe application.

**SOILS**

CLINIC UP may be used to control weeds on all mineral or organic soils or surfaces, including ash and gravel. Only weeds showing green leaf at the time of application can be killed. There is no residual activity with CLINIC UP.

**COMPATIBILITY**

For up to date details of compatible tank mixes please refer to the Nufarm website at [www.nufarm.com/uk](http://www.nufarm.com/uk)

CLINIC UP is not compatible with products containing carfentrazone-ethyl

**FUTURE PLANTING**

CLINIC UP (New Product Application) CLINIC UP/1216

Nufarm UK Limited
CLINIC UP has no long-lasting herbicidal activity in soils after application. Agricultural and horticultural quality soils may be planted up with trees after not less than 7 days after application, unless directed otherwise. Other amenity plants may be planted after the treated vegetation has died back or after cultivation. Under normal weather conditions, cultivations may be conducted 7 days after treatment. Under poor growing conditions wait for the characteristic red/yellow leaf symptoms to appear before cultivating.

**WEED RESISTANCE STRATEGY**

There is a low risk of weeds developing resistance to CLINIC UP. Growers are encouraged to implement a weed resistance strategy based on good agricultural practices and good plant protection practices. Good practice is achieved and enhanced by:

- Following these label recommendations.
- Adopting complementary weed control measures.
- Minimising the spread of weeds and their seeds.
- Implementing good spraying practices to achieve maximum weed control.
- Using the correct nozzles to maximise weed coverage.
- Applying only under appropriate weather conditions.
- Monitoring performance and reporting unexpected results to Nufarm UK Ltd

Strains of some annual weeds, e.g. black-grass, wild-oat and Italian rye-grass, have developed resistance to herbicides which may lead to poor control. A strategy for preventing and managing such resistance should be adopted. This should include integrating herbicides with a programme of cultural control measures. Guidelines have been produced by the Weed Resistance Action Group (WRAG) and copies are available from the HGCA, CPA, your distributor, crop advisor or product manufacturer.

**CARE OF EQUIPMENT**

Wash equipment thoroughly after use with water and cleaning agent to remove traces of herbicide. Traces of herbicide left in the equipment may seriously damage or destroy crops sprayed with the same equipment at a later date.

**COMPANY ADVISORY INFORMATION**

This section is not part of the Product Label under the Plant Protection Products Regulations 2011 and provides additional advice on the product at the discretion of Nufarm.
