

Sencorex Flow

Growers can rely on Sencorex Flow, the proven quality formulation of metribuzin that offers a higher use rate than alternative formulations and provides greater flexibility in use.

Sencorex Flow is a key component in weed control programmes:

- ✓ Activity on emerging weeds from combined foliar and root uptake
- ✓ Wide weed spectrum, including problem grasses and spring germinating BLWs
- ✓ Only liquid (SC) formulation of straight metribuzin available in the UK
- ✓ Compatible in tank-mix with other widely used residual herbicides

Application Rate

The maximum individual application rate of Sencorex Flow is 1.15 l/ha applied pre-emergence for earlies (except on light and very light soils) and maincrop potatoes (all soil types).

Please read product label and latest variety update information carefully when planning herbicide programmes.

A further 'top-up' application of 0.55 l/ha may be applied early post-emergence to named varieties.

If using Sencorex Flow in place of a WDG formulation, apply at the equivalent field rate to achieve similar or better levels of control, e.g. 0.75 l/ha Sencorex Flow replaces 0.75 kg/ha metribuzin 70% WDG.

Trials have confirmed superior control from Sencorex Flow (see chart).

EAMUs

Outdoor and protected ornamental plant production, Outdoor carrot, Outdoor celeriac, Outdoor mallow, Outdoor parsnip, Outdoor sweet potato, Outdoor asparagus, Rhubarb.

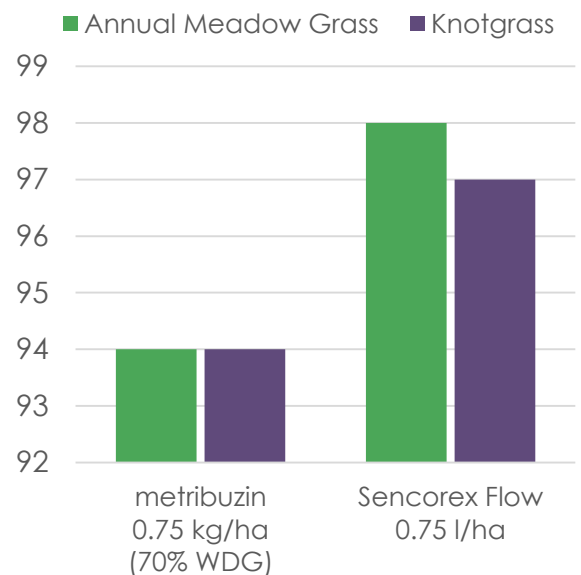

FURTHER INFORMATION

Nufarm Technical updates are eligible for 1 BASIS CPT/year Ref: CP/81650/1920/g. Email claim to linda@basis-reg.co.uk

Sencorex Flow contains metribuzin.
