\* The maximum total dose of florasulam applied to the crop must not exceed 7.5g. For autumn planted crops a maximum total dose of 3.75g of florasulam must be observed for applications made between crop emergence in the year of planting and February 1st in the year of harvest.

## Lector

### Lector 50g/l florasulam SC

Lector provides good control of a range of economically damaging broad-leaved weeds in cereals. Label flexibility allows a split application up to a maximum total dose of 150ml/ha where weed emergence is expected over a longer period.
