

Winter wheat TI treatments for lower risk crops

The combination of late drilling, dry weather and varieties more resistant to Septoria means that many crops will not require expensive new fungicides at TI, instead a combination of two proven triazoles, bromuconazole and tebuconazole plus a multisite such as chlorothalonil, mancozeb or folpet should ensure a much higher return on costs

Soleil disease activity

Soleil is a unique triazole mixture containing 167g/l bromuconazole + 107g/l tebuconazole formulated as an EC and approved for use in Wheat, Rye and Triticale.

Soleil boasts superior activity on Yellow Rust, Septoria tritici, and mildew compared to prothioconazole with matching eyespot and Sharp eyespot control

Soleil offers flexible dose rates and mixing partners depending on disease risk scenario.

Mixtures by disease risk

Mixture	
Soleil 0.8 l/ha + multisite	Yellow Rust and eyespot with lower Septoria risk
Soleil 0.8 L + SDHI + multisite	Where Septoria risk is higher

Benefits of choosing Soleil

- Excellent option at TI in mix with CTL, Dithane or folpet for lower Septoria risk crops
- Valuable eyespot and sharp eyespot activity
- Superior activity to straight tebuconazole on a range of cereal diseases

Nufarm Technical updates are eligible for 1 BASIS CPT/year RefCP/81650/1920/g. Email claim to linda@basis-reg.co.uk

FURTHER INFORMATION

Soleil contains bromuconazole and tebuconazole and is a trade mark of the Sumitomo Chemical Co. Ltd
Dithane contain mancozeb and is a trade mark of Dow Chemical Co Ltd
