

FALL WEED CONTROL

ONE FINAL PUSH IN THE FALL CAN PAY OFF COME SPRING.

As frustrating as it may seem, fall weed control is necessary in many cropping systems and geographies. Yes, budgets are tight, bills are being paid, and that vacation you have been putting off all year seems necessary for your well-being. But one more small investment – one more week of diligent weed control – can pay huge dividends for next year's crop.

WHEN CONSIDERING FALL WEED CONTROL OPTIONS, HERE ARE SOME THINGS TO REMEMBER:

1 SCOUTING IS NECESSARY

To effectively control fall weeds we must know some things about them. As with any herbicide application, weed species, size and density are all important factors of selecting herbicide and rate.

2 CONSIDER YOUR MODES OF ACTION

All season long you have paid close attention to follow best management practices to slow herbicide resistance, why give up now? Take note of modes of action that you may have used throughout the growing season and consider rotating them with others.

3 THE BENEFIT OF RESIDUAL HERBICIDES

One of the most effective resistance management tools include residual herbicides. These herbicides help prevent weed seedling establishment until mother nature kicks in and does it naturally. In the past couple of growing seasons, challenging weather conditions have made it difficult to get preplant early season burndown applications completed on time. This is where residual herbicides can spread the workload and buy time should the spring application window be compressed. Also remember that once soils reach a specified temperature, residual herbicides become 'dormant' and are stored. This means that when soil temperatures rise and weed seed begins germinating again, adequate herbicide is already in the soil ready to act on these weeds.

FALL BURNDOWN WITH RESIDUAL RECOMMENDATIONS

WEEDMASTER® or BURNMASTER™ (2 pt/A) + PANTHER® SC (2-3 oz/A) + CREDIT® XTREME (22-32 oz/A)

Broad-spectrum program to control winter annuals as well as fall and late summer germinating weeds. Addition of Panther SC provides greater burndown activity and residual activity to provide excellent flexibility for spring planting and weed control options.

Include NIS or COC for emerged weeds.

SCORCH™ or BURNMASTER™ (2 pt/A) + PANTHER® SC (2-3 oz/A) + CREDIT® XTREME (22-32 oz/A)

Broad-spectrum program to control winter annuals as well as fall and late summer germinating weeds. Addition of Panther SC provides greater burndown activity and residual activity on difficult weeds, including kochia. This program provides excellent flexibility for spring planting and weed control options.

Include NIS or COC for emerged weeds.

NUFARM BURNDOWN AND RESIDUAL PORTFOLIO

SELECTIVE HERBICIDE				
BurnMaster™	dicamba acid + 2,4-D ester	Group 4	2 - 3 pt/A	Ester formulation for greater activity as weather cools in the fall
Cloak®	metribuzin + chlorimuron	Group 2, 5	2.25 - 7 oz/A	Consistent burndown of key winter annuals for effective spring weed control
Diablo® or Clash™	DMA salt or DGA salt dicamba	Group 4	1/2 - 1 pt/A	Proven dicamba formulations for fall broadleaf weed control
Panther® MTZ	flumioxazin + metribuzin	Group 14, 5	12 - 18 oz/A	Excellent dual-MOA herbicide for burndown and residual control of key overwintering weeds, including marestail
Panther® Pro	metribuzin + flumioxazin + ammonium salt of imazethapyr	Group 5, 14, 2	12 - 15 oz/A	Lasting residual control of more than 60 broadleaf weeds and grasses including susceptible winter annuals and many glyphosate-resistant species
Panther® SC	flumioxazin	Group 14	2 - 3 oz/A	Provides excellent residual activity of key weeds in a convenient liquid formulation
Scorch™	dicamba acid + fluroxypyr + 2,4-D ester	Group 4	2 - 3 pt/A	3 proven active ingredients in an ester formulation with fluroxypyr for greater spectrum and activity on key weeds such as kochia
Weedar® 64	2,4-D amine	Group 4	1 - 4 pt/A	Premium, low-volatile formulation that readily mixes in water to provide optimum coverage
WeedMaster®	DMA salt + 2,4-D amine	Group 4	2 - 3 pt/A	Proven standard for broad-spectrum broadleaf burndown
Weedone® family (638, 650, LV4, LV6, Solventless)	2,4-D ester	Group 4	1 - 4 pt/A	Several ester formulations specifically designed for cooler weather efficacy and tank mixing with other herbicides and fertilizers
NON-SELECTIVE HERBICIDE				
Credit® 5.4 Extra	glyphosate, isopropylamine salt	Group 9	12 - 36 oz/A	Superior broad-spectrum control of tough annual and perennial broadleaf weeds and grasses
Credit® Xtreme	Dual salt formulation of glyphosate (K and IPA)	Group 9	22 - 32 oz/A	Dual salt formulation in a 4.5 lb ae/gal load for excellent tank mixing with other herbicides including 2,4-D amine
