

EXTEND CONTROL WITH A PIPER[®] PROGRAM.

EVEN AFTER FIVE MONTHS, THE RESIDUAL POWER OF A PIPER HERBICIDE PROGRAM IS STILL AT WORK.

An early-season spray of glyphosate is an effective knockdown solution, however it will not prevent emergence of germinating seedlings as the season progresses. Keep weeds under control all season with a Piper Program. Notice the increasing percentage of weed cover two, four, and five months after a glyphosate-only treatment. A Piper program holds weeds down – even 5 months later.

A PIPER PROGRAM MAKES A DIFFERENCE		A Piper program improves extended weed control			A Piper program adds residual to keep key weeds under control – even after five months														
		58 DAT (2 MTHS) WEED COVER ON JUNE 26	122 DAT (4 MTHS) WEED COVER ON AUG 29	148 DAT (5 MTHS) WEED COVER ON SEP 24	WILD CARROT	MARESTAIL	FOXTAIL	BLACK MEDIC	CRABGRASS	DANDELION	COMMON RAGWEED	PENNSYLVANIA SMARTWEED
