

Credit[®] 41

NON-SELECTIVE HERBICIDE

Superior Broad-Spectrum Weed Control.

Credit[®] 41 is a non-selective, glyphosate herbicide that offers consistent, powerful weed control, even on difficult-to-control weeds such as kochia, lambsquarters and morningglory. Labeled for use over the top of glyphosate-tolerant crops, Credit 41 delivers excellent crop safety.

KEY PERFORMANCE BENEFITS

- Superior broad-spectrum control of tough annual and perennial broadleaf weeds and grasses
- Works fast – brown down of annuals in 2 to 3 days and perennials in 7 to 10 days
- Low-load formulation allows users to choose surfactant additive to meet local needs
- Excellent crop safety

EPA REG. NO.	71368-20
ACTIVE INGR.	glyphosate (41%) <i>(equivalent to 3 lbs/gal of acid glyphosate)</i>
FORMULATION	liquid
CHEM. FAMILY	glycines
GROUP NO.	9
MODE OF ACT.	amino acid synthesis inhibitor
REI	4 hours
SIGNAL WORD	caution
RESTRICTED	no
PACKAGE SIZE	2 x 2.5 gal, 30 gal, 265 gal tote, bulk

Credit® 41

NON-SELECTIVE HERBICIDE

KEY USES

Burndown applications in reduced tillage and fallow systems

Non-crop uses including farm ditches, CRP and dormant rangeland

Roundup Ready® cropping systems including corn, cotton, soybeans and sugarbeets

KEY WEEDS CONTROLLED

(See product label for complete list)

Many annual and perennial weeds and woody brush

APPLICATION RECOMMENDATIONS

GENERAL USE RATES

Apply 8 to 48 ounces per acre – see label for specific application details and tank-mix options.

Apply to actively growing grass and broadleaf weeds. If weeds have been mowed or tilled, do not treat until plants have resumed active growth and have reached the recommended stages.

Allow at least 3 days after treatment before tillage.

For maximum agronomic benefit, apply when weeds are 6 inches or less in height.

To prevent seed production, applications should be made prior to seedhead formation.

This product does not provide residual control; therefore, delay application until maximum weed emergence. Repeat treatments may be necessary to control later germinating weeds.

Nonionic surfactants which are labeled for use with herbicides may be used and are recommended with Credit 41. Do not reduce rates of this product when adding surfactant. When adding additional surfactant, the recommended rate is 0.25% to 0.5% surfactant concentration (1 to 2 quarts per 100 gallons of spray solution) when using surfactants which contain at least 70% active ingredient (ai) or a 1% surfactant concentration (4 quarts per 100 gallons of spray solution) for those surfactants containing less than 70% ai. Read and carefully observe surfactant precautionary statements and other information appearing on the surfactant label.

See label for complete application rates and recommendations.
