

Veteran® 720

Broad-Spectrum Power Clears Out More Than 75 Weeds

Veteran® 720 Herbicide is a water-soluble herbicide for brush and broadleaf weed control on rights-of-way, fence rows, pasture and range, farmstead and other non-crop areas. Veteran 720 offers economical, wide spectrum control of more than 75 broadleaf weeds, brush and woody species. Both actives in Veteran 720, 2,4-D and dicamba, act on a systemic level, causing discoloration, epinasty, defoliation and ultimately, elimination of the weed.

KEY PERFORMANCE BENEFITS

- Dual active formulation provides excellent brush, vine and broadleaf weed control
- Economical control of more than 75 weed species
- Selective weed control - tolerant to native grasses
- Tank-mix compatible with Patriot®, Razor® Xtreme and other herbicides* for comprehensive weed management

* *Compatibility test required*

|---------------------|-------------------------------------|
| EPA REG. NO. | 228-295 |
| ACTIVE INGR. | 2,4-D (24.58%), dicamba (12.82%) |
| FORMULATION | liquid |
| CHEM. FAMILY | phenoxy, benzoic acid |
| GROUP NO. | 4 |
| MODE OF ACT. | synthetic auxin growth regulator |
| SIGNAL WORD | danger |
| RESTRICTED | no |
| PACKAGE SIZE | 2 x 2.5 gal, 220 gal tote |

Grow a better tomorrow.

Veteran® 720

KEY USES

Forest brush
Industrial sites
Non-crop areas
Non-irrigation ditchbanks
Pasture
Rangeland
Rights-of-way
Utility line control

KEY WEEDS CONTROLLED

(See product label for complete list)

ANNUALS

Buckwheat, wild
Carpetweed
Chickweed
Clover
Cocklebur
Daisy, English
Henbit
Knawel
Lambsquarters
Morningglory
Mustard
Pigweed
Purslane
Ragweed
Smartweed
Velvetleaf

BIENNIALS

Ragwort, tansy
Thistle, musk

PERENNIALS

Bindweed, field
Carrot, wild
Dock, curly
Dogfennel
Knapweed, Russian
Milkweed
Ragweed, perennial
Sorrel, sheep
Spurge, leafy
Thistle, Canada
Toadflax, dalmatian

WOODY BRUSH AND VINES

Beech
Multiflora rose
Puncturevine
Sagebrush
Wax myrtle

USE SUMMARY

MIXING AND APPLICATION

Veteran® 720 Herbicide is a water-soluble formulation which can be applied using water or oil/water emulsions as the carrier. Herbicide adjuvants or other spray additives (emulsifiers, surfactants, wetting agents, drift control agents or penetrants) may be used for wetting, penetration or drift control. Read and follow all use recommendations and precautions on the label(s) of product(s) used. A compatibility test should be made prior to tank-mixing.

Veteran 720 may be applied with ground or aerial equipment for broadcast treatments, or with handgun, backpack or similar types of equipment for treatment of individual clumps or small areas (spot treatments).

NOTE: To prepare oil/water emulsions, shake well before using, half-fill spray tank with water. Add a suitable emulsifier. Then, with constant agitation, slowly add the appropriate amount of herbicide followed by the necessary oil (or slowly add a premix of emulsifier and oil). Finally, fill the rest of the tank with water. Maintain vigorous agitation during spray operation to prevent oil and water from forming separate layers.

RATES

Regardless of the species to be controlled, spray volumes should be high enough to allow for good spray coverage. Make applications when weeds and brush are actively growing. The addition of surfactants can increase control. Biennials are best controlled when treated in the rosette stage. Regrowth may occur on resistant species. Retreatments can be made as needed; however, do not exceed a total of 2 gal (2 lb a.i. dicamba + 3.8 lb a.i. 2,4-D) of Veteran 720 per treated acre during a growing season. To control additional weed species, Veteran 720 may be tank-mixed with any of the products listed on the label.

HERBACEOUS BROADLEAF WEED CONTROL: Apply 1 to 4 qt of product in 20 to 100 gal of water per treated acre. When using low-volume application equipment, 3 to 20 gal of water per acre is acceptable. 1 to 2 qt of product is recommended for annuals, 2 to 4 qt for biennials and easy-to-kill perennials, and 4 qt for established perennials. Do not apply more than 2 gal of product per treated acre.

BRUSH AND VINE CONTROL

High Volume Foliar Spot Applications: Mix 1 gal of product in enough water to make 100 gal of spray mix. When using low-volume application equipment, 3 to 20 gal of water per acre is acceptable. Spray volume applied will depend on the size and density of the brush to be treated, but do not apply more than 1 gal of product per treated acre. Direct the spray to treat all foliage, stems and root collars to wet.

Broadcast Applications with Ground Equipment: Apply 1 gal of product in 20 to 100 gal of water per treated acre. When using low-volume application equipment, 3 to 20 gal of water per acre is acceptable. Spray volume applied will depend on the size and density of the brush to be treated, but do not apply more than 1 gal of product per treated acre. Spray all foliage, stems and root collars to wet.

AERIAL APPLICATIONS: Aerial applications may be made to control either herbaceous or woody plants. Apply 1 to 4 qt of product (for herbaceous weeds) or 1 to 2 gal of product (for woody brush and vines) in 5 to 40 gal of water per treated acre. Coverage is important, so increase spray volume when treating dense stands of weeds or brush. Do not apply more than 2 gal of product per treated acre.

See label for complete directions for use.
