Powdery mildew
Pseudomonas blight
Purple blotch
Raceme blight
Red leaf spot
Septoria leaf blotch
Septoria spot
Sigatoka
Stem blight
Tip blight
Yellow rust
Zonate leaf spot

USE SUMMARY

Champ® Dry Prill can be used with all types of spraying equipment. The volume per acre will differ depending on the specific crop and the equipment used.

APPLYING SPRAY MIXTURE

The amount of Champ Dry Prill applied per acre in concentrate and aerial sprays should be the same as the amount applied per acre in dilute sprays. The required amount should be mixed with enough water to thoroughly cover the crop with spray mixture and is to be applied to the point of runoff. The volume of water needed will depend upon the spray equipment used and the size of the crop being sprayed.

APPLYING DILUTE HIGH-VOLUME SPRAYS

On vegetable crops use 25 to 100 gal of spray mixture per acre; on fruit and nut trees use 250 to 800 gal per acre. As much as 1,500 gal per acre may be needed for large trees.

APPLYING CONCENTRATE GROUND SPRAYS

On vegetable crops use 5 to 20 gal of spray mixture per acre; on fruit and nut trees use 25 to 250 gal per acre.

APPLYING AERIAL SPRAYS

Use 3 to 30 gal per acre.

See product label for complete directions for use.
