

PRODUCTIVE PASTURES REQUIRE GRASSMANSHIP™

GRASSMANSHIP IS ABOUT PROTECTING YOUR MOST VALUABLE GRASS ASSETS.

Nufarm recognizes your commitment to producing high quality beef. One key step is assuring high-quality range and pasture productivity. Now more than ever, better grass can equate to lower production cost per head and higher profits. When you take the steps to make your grass the best it can be – that's Grassmanship.

The Grassmanship program provides best practices and product solutions to help you manage range, pasture, and premises with sustainable precision. Nufarm applauds your dedication to quality Grassmanship that makes a true difference to the land and your cattle.

NUFARM RANGE & PASTURE SOLUTIONS SUPPORT YOU

ON THE RANCH...

GRASS QUALITY AND DENSITY RESPONSE

INVASIVE SPECIES MANAGEMENT

BRUSH CONTROL AND RANGE RESTORATION

AT THE FARM...

CATTLE-CONCENTRATED PASTURE RECOVERY

HAY AND FORAGE YIELD IMPROVEMENT

IRRIGATED GRASSLAND PERFORMANCE

ON THE PREMISES...

OUTBUILDING, ROADSIDE, AND FIELD BORDER WEED CONTROL

MANAGE BRUSH AND WEEDS

RE-ESTABLISH GRASS QUALITY

RAISE YOUR CARRYING CAPACITY

Grassmanship™ is about protecting your most important asset, grass. Higher grassland productivity means higher stocking numbers, higher yields and higher profitability per acre.

Grow a better tomorrow

CONSIDER THESE PRACTICES IN YOUR APPROACH TO GRASS MANAGEMENT

WORK A PLAN: Develop a plan that addresses under-performing grass assets

SOIL TEST: Test in the fall to understand and address fertility needs

FERTILIZE: Fertilize using a range of alternatives to increase production

MOW PASTURE: Mow (regularly if feasible) to increase density and quality

ROTATE GRAZING: Rotate following a diligent paddock or pasture use plan

RENOVATE PASTURE: Renovate by planting to improve stand density

REDUCE WEEDS: Apply the right herbicide at the right time when needed

NUFARM OFFERS HERBICIDE SOLUTIONS TO HELP YOU STAY IN CONTROL

WeedMaster® delivers consistent weed control in pastures and fallow. This selective, post-emergence herbicide provides tough, long-lasting control of a broad spectrum of annual, biennial and perennial broadleaf weeds.

E-2 controls 240 labeled species. When tank mixed with a bareground or soft residual partner, it can provide season-long control of resistant species such as kochia and marehail.

Spitfire® provides above- and below-ground burndown of broadleaf weeds, including all herbicide-resistant species. Treated pastures will benefit from weed control that ensures optimum yields, while managing the risk of herbicide-resistant weed populations.

Clean Slate® herbicide delivers post-emergent control to difficult weeds, including kudzu and thistle. Plus, it offers broad-range selectivity on established grasses with outstanding residual activity.
