

SOYBEANS

SUPERIOR NEMATODE PROTECTION, INCREASED YIELD.

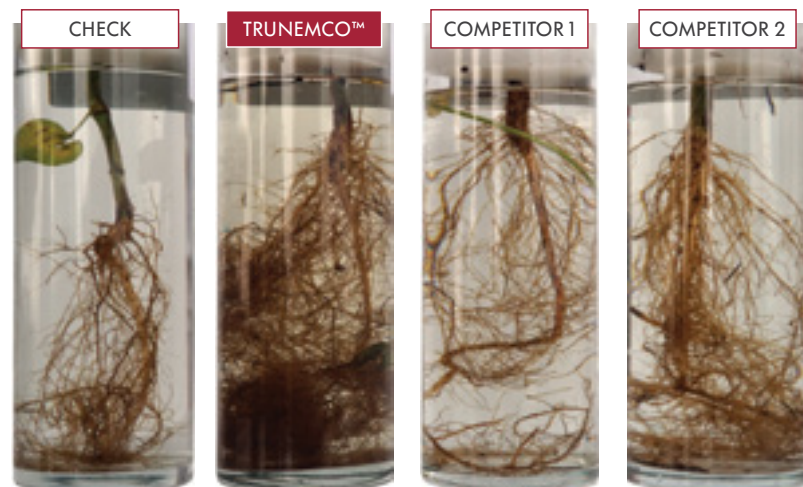

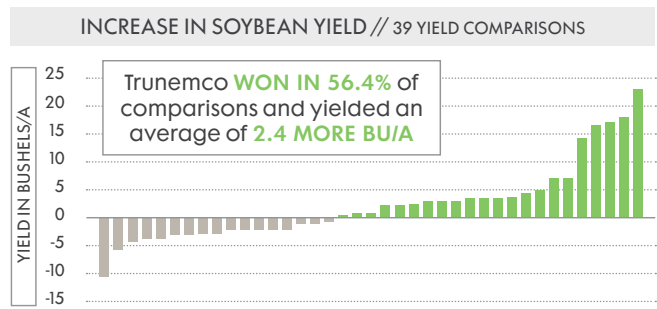

START WITH TRUE NEMATODE CONFIDENCE

Trunemco™ is a new nematode seed treatment solution that helps soybeans thrive. This patented technology primes plant physiology, activating its natural defense system for superior broad-spectrum protection against nematode feeding and establishment. As an added assist, Trunemco microbial protection acts as an external barrier. This dual defense provides a leading level of protection delivering higher yields — the kind that can make a true bottom-line difference.

TRUNEMCO™ VS AVICTA®

TRUNEMCO™ VS CLARIVA®

LEADING PROTECTION

Soybeans treated with a seed-applied fungicide and insecticide without (Check) or with a nematicide, grown in SCN infested soil, and transferred to water-filled containers.

CHOOSE YOUR BEST DEFENSE

BASE ELITE

NEMATODE DUAL-DEFENSE

- Primes plant physiology activating natural nematode barriers that optimize defense
- Two AIs offer dual defense, inside and out, against nematode feeding and establishment
- Leading level of protection allows plants to thrive delivering higher yields
- Protects against: Soybean Cyst Nematode (SCN), root knot and reniform nematodes

FUNGICIDE

- Protects seeds against rots and young seedlings against Rhizoctonia and Fusarium
- Delivers Pythium and Phytophthora control
- Suite of products work together for increased control and systemic disease protection

NUTRIENT MANAGEMENT

- Faster emergence and establishment
- More robust growth
- Increased leaf area and photosynthetic capacity

INSECTICIDE

- Early season control of most foliar and soil insect pests
