

## STOP WEEDS WITH MANOR®.

Manor® is a highly selective premium post-emergence herbicide for effective control of grassy and broadleaf weeds in turfgrass. Specially formulated to control annual and perennial weedy grasses such as ryegrass, bahiagrass and foxtail. Also provides effective control of broadleaf weeds. The active ingredient, metsulfuron methyl is absorbed through plants' surface and roots to inhibit production of key amino acids; preventing cell division and stopping weed growth.

### COMPETITIVE ADVANTAGES

- Works effectively on warm-season turf grasses
- Removes bahiagrass from St. Augustine and Bermuda grasses
- Controls annual and perennial weedy grasses and broadleaf weeds, including rosette- and vining-type dicots
- Safe alternative for use on buffalo grass

### AT-A-GLANCE INFO

## STOP WEEDS WITH MANOR®.

### KEY USES

Cemeteries  
Golf courses (fairways, aprons,  
tees and roughs)  
Lawns  
Non-crop areas  
Parks

### KEY WEEDS CONTROLLED

(See product label for complete list)

Bahiagrass  
Clover  
Dandelion  
Dollarweed  
Foxtail  
Oxalis  
Ryegrass  
Spurge

### USE SUMMARY

**KENTUCKY BLUEGRASS AND FINE FESCUE:** Apply 0.25 to 0.5 ounce of this product per acre. Do not exceed 0.5 ounce per acre within a 9-month period.

**ST. AUGUSTINE GRASS, BERMUDAGRASS, BUFFALOGRASS AND ZOYSIA GRASS (MEYERS AND EMERALD):** Apply 0.25 to 1.0 ounce of this product per acre for weed control. Some chlorosis or stunting of the turfgrass may occur following application.

**Bahiagrass Control:** For the selective control of bahiagrass in Bermudagrass turf, use 0.25 to 0.75 ounce of this product per acre. Use the higher rates of the range on Argentine, common and Paraguayan bahiagrass. Apply a repeat treatment in 4 to 6 weeks if necessary. Some chlorosis or stunting of Bermudagrass may occur following the application.

#### CENTIPEDEGRASS

Apply 0.25 to 0.5 ounce of this product per acre for weed control. Some chlorosis or stunting of the turfgrass may occur following the application.

Addition of a non-ionic surfactant of at least 80% active ingredient at 0.25% by volume (1 quart per 100 gallons) provides maximum performance, but may temporarily increase chlorosis of the turf.

Allow one week between the application of this product and other control (pesticide containing) products. This guideline can be relaxed where severe insect or disease attack requires immediate treatment.

When overseeding, wait 8 weeks after application. Do not apply to any body of water, including streams, irrigation water or wells. Do not apply where runoff water may flow onto agricultural land, as injury to crops may result.

Do not allow spray drift onto adjacent crops or other desirable plants or trees as injury may occur.

[See product label for complete directions for use.](#)

### USE PRECAUTIONS

Use lower rates for minimum chlorosis of the turf.

Do not apply this product to turf under stress from drought, insects, disease, cold temperatures, temperatures above 85°F on cool-season grasses or poor fertility as injury may result.

Do not apply to turf less than 1 year old.

Do not use on bahiagrass where it is the desired turf, as severe injury may result.

Do not plant ornamentals such as shrubs and trees in treated areas for at least 1 year after the last application or bedding plants for at least 2 years.

[See product label for complete application precautions.](#)
