

MITES CAN'T HIDE

OUR MOST POWERFUL MITE PROGRAM YET

Mites are a persistent problem that can appear any time of the year in greenhouses and under warm and dry situations outdoors. Because mites reproduce quickly and are present in various life stages, rotating solutions that affect the eggs, pupae and adult stages with differing IRAC modes-of-action are vital to a strong mite program.

Typical spider mite webbing

Underleaf damage

Red spider mite

Two-spotted spider mite

Spruce mite

KNOCK DOWN MITES AT EVERY LIFE STAGE WITH THIS 6-WEEK POWER PROGRAM

	LIFE CYCLE	WEEK 1	WEEK 2	WEEK 3	WEEK 4	WEEK 5	WEEK 6
ENGULF™ GHN GREENHOUSE AND ORNAMENTAL MITICIDE IRAC 20D	E J A			2–4 fl oz	—————		
TETRASAN® 5 WDG MITICIDE / OVICIDE IRAC 10B	E J	8–16 oz	—————				
MINX™ 2 MITICIDE / INSECTICIDE IRAC 6	J A	4 fl oz	—————				

This six week program ensures two modes of action, with multiple life cycle attacks, are always in rotation.

MINX 2 + TETRASAN 5 WDG

Start with this duo tankmix. Minx 2 delivers fast kill for quick population control. With slower initial takedown but much longer residual, TetraSan delivers extended, weeks-long control to eggs and juveniles.

ENGULF GHN

On week 3, blast mites – and resistance – with an alternate IRAC mode-of-action. Engulf GHN picks up where Minx 2 leaves off. Working on all life stages for up to 28 days, Engulf GHN combines with TetraSan to finish out our most powerful mite program yet.

LIFE CYCLE KEY: E EGG J JUVENILE A ADULT
