

ANUEW™ VS PRIMO MAXX®.

COMPARISON FROM NUFARM'S POINT OF VIEW

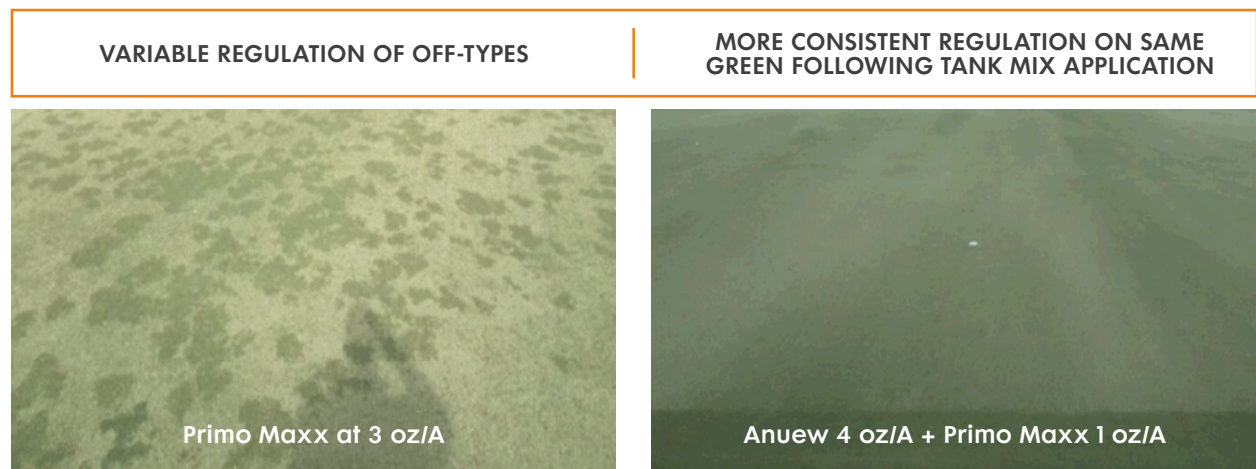

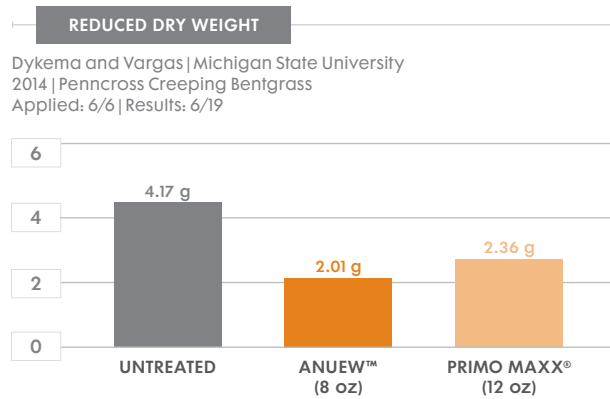

CONSIDER THIS:

1. Sixteen ounces per acre of Primo Maxx® provides stronger regulation of Tifway 419 than Anuew™ at the same application rate – this is reflected in the higher label use rates for Anuew.
2. Even slightly different camera angles will exaggerate differences in clipping throw. Different mowers can also significantly impact the turf cut and clipping throw.
3. One of Anuew's advantages over Primo Maxx is its ability to regulate "off-type" Bermudagrass that may become more prominent and noticeable with repeated Primo Maxx use. See pictures on opposite page.
4. A tank mixture of Anuew with Primo Maxx has shown promise for consistent growth regulation especially on Bermudagrass greens. See pictures on opposite page.
5. Anuew is softer on collars where there is a bentgrass/Bermudagrass interface.
6. Anuew provides greater growth regulation than Primo Maxx on creeping bentgrass when applied at comparable rates. See MSU trial summary on opposite page.

UNIVERSITY TRIALS AND IN-FIELD USE SHOW HOW ANUEW STACKS UP
