

# KEYS TO SUCCESS WITH SURE POWER.

## SurePower® SELECTIVE HERBICIDE

Sure Power® is a new selective herbicide tool with increased speed and spectrum to manage tough to control weeds. Sure Power has fast post-emergence activity on sedges along with annual and perennial grasses and broadleaf weeds – including creeping bentgrass, crabgrass, nimbleweed, goosegrass and foxtail.

### PRECAUTIONARY TIPS FOR SUCCESSFUL RESULTS

Refer to the precautionary language on the Sure Power label for practices to avoid

- Do not tank mix with any other products, fertilizers or surfactants
- Use caution when applying to ensure no spray solution collects on the tires of application equipment
- Assure that spray is completely dry prior to entering treated areas as accumulation on tires can lead to tracking
- Avoid applications during conditions of fog, high moisture, and wet foliage
- Avoid applications for at least 14 days following freezing conditions or frost

### THE RIGHT TIME TO SPRAY SURE POWER®

Focus broadcast Sure Power applications when turf is hardened-off (summer through early fall)

- Air and soil temperatures are warmer (consistently)
- Grass dries faster
- Turfgrass cuticles are thicker and plants have additional protection on their leaves
- Emergence of most key target weeds for Sure Power has occurred

Follow yellow nutsedge as the indicator weed of when to use Sure Power.  
If you see yellow nutsedge in yards, you can spray Sure Power®.
