CERCOSPORA CONTROL ON PANSIES

Q What products do you recommend for rotation to treat Cercospora on pansies?

A Cercospora is a foliar disease, so spacing and overhead watering are good cultural practices, then add preventive sprays to avoid leaf damage. There are numerous products with good efficacy.

Spectro® is a good weapon, or for tank mixing with a bacterial potential, I'd suggest Cuproxat® + 3336®. You're looking for that barrier protectant and internal systemic combo.

Always include different modes of action in the rotation for resistance management. Here, Affirm™, Emblem™ or Spectro® are very effective options.

Remember there is a second disease on pansies that give a similar foliar expression in anthracnose. Luckily treatment recommendations are very similar.
