FUNGICIDES AND INSECTICIDES FOR VEGETABLE CROPS

Q What products would you recommend for disease and pest management for vegetables?

A Having a preventive plan in place is more beneficial than curative control when tackling vegetable plant pests. There are fungicide and insecticide products that can help manage an array of issues.

Recommended fungicides:

3336® Brands: A broad fungicide that can treat a variety of diseases when drenched.

Affirm™ WDG: Apply spray or drench and a unique mode of action. Great for control of alternaria blight, anthracnose, early blight, powdery mildew, Rhizoctonia and scabs.

Alude™: A phosphorus-based drench fungicide with a 4-hour re-entry interval that treats, among others, downy mildew, Phytophthora and Pythium.

Recommended insecticides:

Distance® IGR: A liquid insect growth regulator to control whiteflies, fungus gnats, scales and other pests.

Gnatrol® WDG: OMRI Listed®, and **Safari®**—both can be used as a drench or spray but drenching is recommended.

TriStar®: A broad-spectrum insecticide spray.
