

Anuew™

PLANT GROWTH REGULATOR

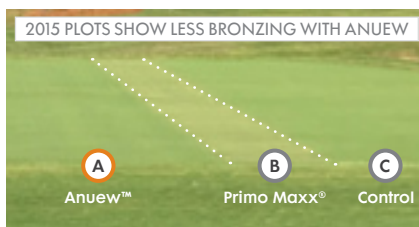

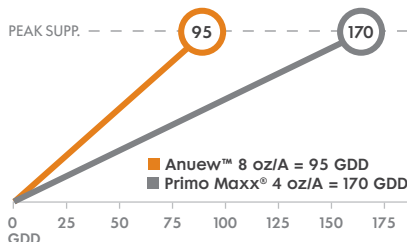

SOLUTION FOR // WARM-SEASON TURFGRASS

FASTER SUPPRESSION IS ONLY THE BEGINNING

In warm-season species, Anuew™ works differently than Primo Maxx® and many superintendents in the south are turning to a mix of Anuew and Primo. Reasons include faster suppression, forgiving collar regulation, and improved appearance and playability – making both managers and members very happy.

REGULATE BETTER WITH FASTER SUPPRESSION + GREENER COLOR

Anuew enters the plant quicker and its softer chemistry results in less bronzing.

PEAK SUPPRESSION: Bermudagrass trials at NCSU, TN and GSSU. BRONZING PLOTS: Bermuda greens, NC, 2015

SAY GOODBYE TO COLLAR DECLINE

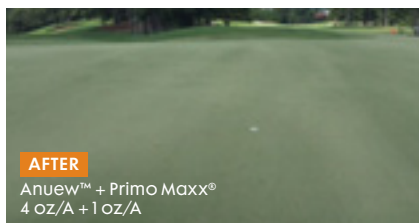

Anuew works with equal intensity, but shorter duration effect to virtually eliminate the risk of over-regulation.

The Anuew + Primo combo balances suppression and rebound while maintaining appearance and health. Over-spray on collars from weekly green sprays won't lead to collar burnout from regulation overload.

MASK UNSIGHTLY BERMUDAGRASS OFF-TYPES

Anuew camouflages mutations resulting in better, more uniform field appearance.

Champion Bermuda greens, Atlanta, GA

SUGGESTED RATES

// BERMUDAGRASS Greens & Fairways

2 - 8 oz/A Anuew™ +
1 - 2 fl oz/A Primo Maxx®

220 GDD_(10° C)*

// BERMUDAGRASS Greens & Fairways

2 - 8 oz/A Anuew™

120 GDD_(10° C)*

// ZOYSIAGRASS Greens & Fairways

6 - 12 oz/A

WONDERING WHEN TO REAPPLY?

Anuew™ is the first EPA approved label with GDD model application.

TRACKING // ALERTS // GDD MODELS

*Warm-season GDD model utilizes a base of 10° Celsius.

BEST PRACTICES

Use enough volume to wet turfgrass without significant runoff.

Do not irrigate or water treated areas within 4 hours of application.

Include a non-ionic surfactant for improved coverage and performance consistency.

Include 1 lb ammonium sulfate per pound of Anuew if water source is hard (> 140ppm calcium).
