

Anuew™

PLANT GROWTH REGULATOR

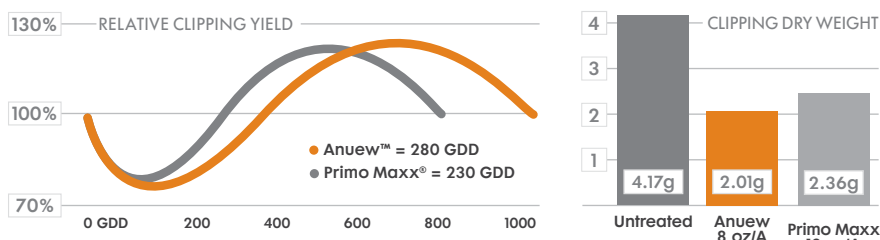

SOLUTION FOR // COOL-SEASON TURFGRASS

OUNCE FOR OUNCE, ANUEW DELIVERS MORE

Even at lower use rates, Anuew delivers longer control in cool-season turf – saving labor and dollars with less applications, less mowing and less clippings.

REGULATION THAT WORKS TO THE VERY LAST MOW

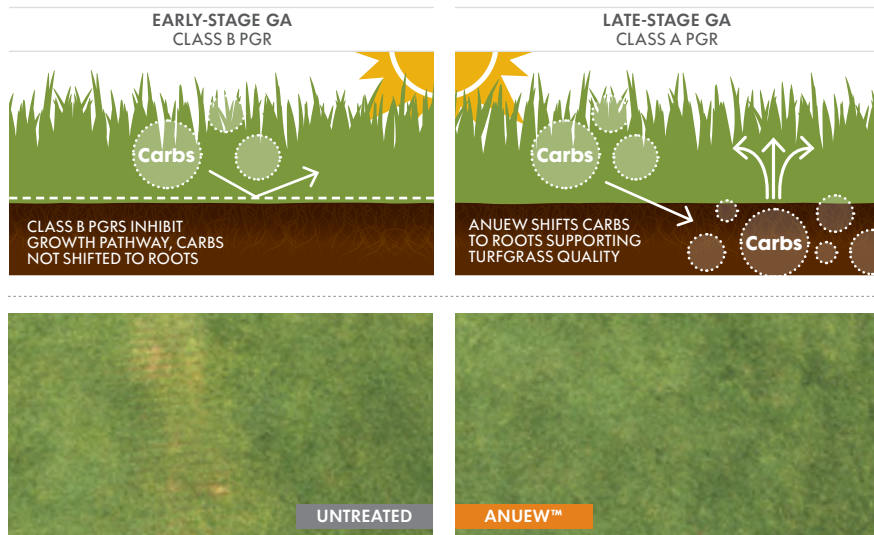

Anuew doesn't give up early. Gain an average of two extra regulation days for consistent suppression, and fewer clippings, from day one to day 14.

CLIPPING YIELD: B. Kreuser, University of Nebraska-Lincoln, 2015, Creeping Bentgrass CLIPPING WEIGHT: Dykema and Vargas, Michigan State University, 2014, Penncross Creeping Bentgrass, Applied 6/6; Results 6/19

IT DOESN'T END WITH GREENER BUDGETS, ANUEW GREENS UP GRASS TOO

Unlike early-stage inhibitors, Anuew shifts carbohydrates to the plant roots to visibly improve turfgrass quality, density and appearance.

BEST PRACTICES

Use enough volume to wet turfgrass without significant runoff.

Do not irrigate or water treated areas within 4 hours of application.

Include a non-ionic surfactant for improved coverage and performance consistency.

Include 1 lb ammonium sulfate per pound of Anuew if water source is hard (> 140ppm calcium).
