

# SureGuard® SC

HERBICIDE

## WEED CONTROL PROGRAMS FOR DORMANT BERMUDAGRASS.

SureGuard® SC Herbicide delivers excellent, broad-spectrum weed control for dormant Bermudagrass with two distinct management programs:

- *Poa annua* Program – pre-emergence and post-emergence control of *Poa annua* (annual bluegrass) and annual broadleaf weeds such as chickweed, henbit and bittercress
- Summer Grass Program – pre-emergence control of goosegrass, crabgrass and other summer annual weeds

### POA ANNUA PROGRAM – POA & WINTER ANNUAL BROADLEAF WEEDS

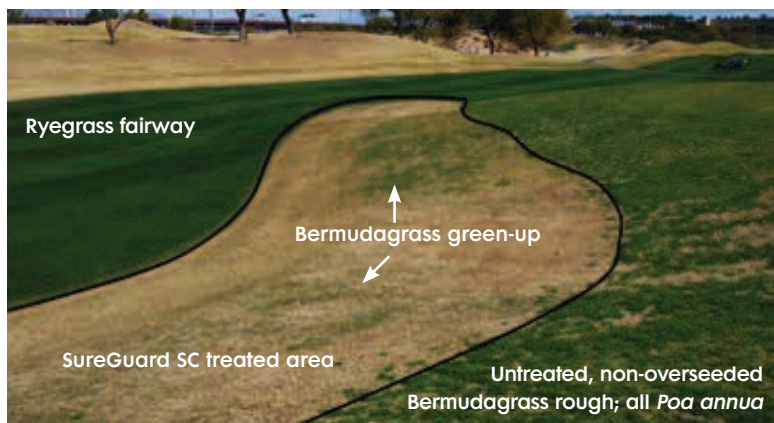

When applied in the late fall to dormant Bermudagrass, SureGuard® SC provides outstanding pre-emergence and post-emergence control of *Poa annua* and a broad spectrum of winter annual broadleaf weeds.

### SUREGUARD® SC DELIVERS

- Low water solubility and tightly binds to soil to reduce runoff and concerns with tracking
- Flexibility to be used around overseeded ryegrass, creeping bentgrass and ornamentals
- Will not delay spring Bermudagrass green-up

### APPLICATION INFORMATION

APPLICATION RATE	TARGET WEEDS	APPLICATION TIMING	ADJUVANT	TANK MIXTURES
8-12 fl oz/A	<i>Poa annua</i> Winter annual broadleaf weeds	Apply when <i>Poa annua</i> is young and actively growing and Bermudagrass is dormant – typically November and December	Add 0.25% v/v non-ionic surfactant	If perennial broadleaf weeds are present at application, tank mix 1/3 fl oz/A of metsulfuron

Location: Arizona State University, Karsten Golf Course

SureGuard SC was applied at 12 fl oz/A plus 0.25% v/v non-ionic surfactant on Nov. 2; picture taken Feb. 15. Bermudagrass is coming out of dormancy in the plot area. SureGuard SC delivered excellent *Poa annua* control when applied to Bermudagrass at dormancy – plus, faster Bermudagrass green-up was demonstrated in treated areas due to no weed pressure.

HERBICIDE

## SUMMER GRASS PROGRAM – GOOSEGRASS & CRABGRASS CONTROL

When applied just prior to Bermudagrass green-up, SureGuard® SC provides outstanding pre-emergence control of challenging summer weeds like goosegrass and crabgrass.

### SUREGUARD SC DELIVERS

- Low water solubility and tightly binds to soil to reduce runoff and concerns with tracking
- Flexibility to be used around cool season grasses (ex., creeping bentgrass greens) and ornamentals
- Will not delay spring Bermudagrass green-up

### APPLICATION INFORMATION

APPLICATION RATE	TARGET WEEDS	APPLICATION TIMING*	ADJUVANT	TANK MIXTURES
12 fl oz/A	Goosegrass Crabgrass Other summer annual weeds	Apply to dormant Bermudagrass as late in winter as possible, yet prior to Bermudagrass green-up – typically late February to early March	Add 0.25% v/v non-ionic surfactant	If perennial broadleaf weeds are present at application, tank mix metsulfuron or glyphosate

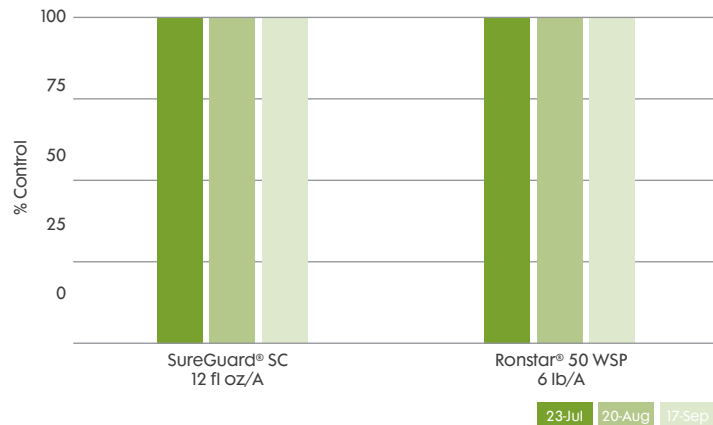

\*When applied upslope from bentgrass greens or Bermudagrass greens overseeded with *Poa trivialis*, allow an adequate buffer zone between greens and the treated area. If uncertain about the size of the buffer, 15 feet is suggested.

### GOOSEGRASS CONTROL WITH SUREGUARD® SC

Applied Mar. 7, SureGuard SC delivered excellent pre-emergence goosegrass control.
