

# **DEFEAT DISEASE IN NURSERY** AND LANDSCAPE ORNAMENTALS

Tourney® EZ Fungicide helps you defeat the toughest diseases on labeled flowering and foliage plants, and ornamental trees and shrubs, singlehandedly saving time and money.

## **TOURNEY EZ DELIVERS**

- · Control of more than 14 of the most common ornamental diseases including apple scab, powdery mildew, rust, anthracnose, leaf spots, conifer blights and more — for up to 28 days
- Low use rates that allow you to do more with less, saving you money
- · Application flexibility available as a foliar spray or soil drench for root and crown diseases

## APPLICATION INFORMATION

LABELED	RATE
DISEASES	(OZ/100 GALS WATER)
Anthracnose Botrytis Blossom Rot/Brown Rot Conifer Blight Damping Off/Stem & Root Rots Eastern Filbert Blight Leaf Spots Powdery Mildew Rusts Shot Hole	2 to 4 oz on a 14-to-28-day interval.  Apply as a foliar spray when targeting foliar diseases or as a drench when targeting crown and/or root diseases.  100 gallons of spray mix will treat 20,000 sq ft of area when using a typical high-volume sprayer. If using a low volume sprayer, adjust concentration to apply the same amount of product per unit area.

## DEFEAT DISEASE IN NURSERY AND LANDSCAPE ORNAMENTALS

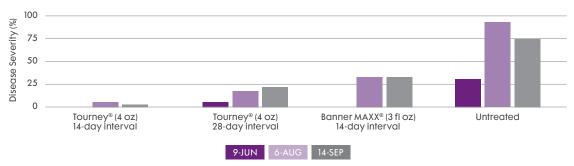

One of the most common diseases on crabapple and non-bearing apple trees for nurseries and landscape settings in cool, humid regions is apple scab, caused by Venturia inaequalis. Unsightly leaf spots are the most visible and offensive symptoms of apple scab, but petioles, blossoms and fruit are also susceptible to infection. Extensive leaf infections result in leaf defoliation. Successive years of leaf defoliation weaken the tree, leading to lower quality blooms in subsequent years and increased sensitivity to damage from cold temperatures. Tourney EZ provides excellent control of apple scab, even when applied on a 28-day interval.

#### TO BEST CONTROL APPLE SCAB, APPLY TOURNEY EZ

- At 2 to 4 fl oz product per 100 gallons water
- · As a full coverage, foliar spray to the point of run-off
- On a 14- to 28-day interval

#### APPLE SCAB CONTROL, CRABAPPLE (MALUS SP.) TREES

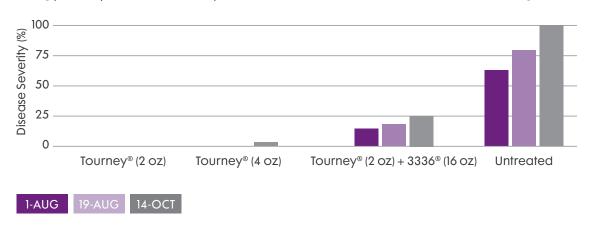

Apple scab can be an especially tough disease and Tourney delivers best-in-class control even on 28-day spray intervals. The chart below demonstrates the superior apple scab control of Tourney vs. the industry standard.

Source, B. Rao, Davey Tree. Treatments were applied 23 April, 5 May (14 day interval only), & 21 May. Natural infections of Venturia inaequalis were rated. Rates are ounces per 100 gallons water.

#### TOURNEY EZ DELIVERS OUTSTANDING LILAC POWDERY MILDEW

Tourney EZ performs well even in high disease severity situations. The chart below demonstrates how Tourney delivers outstanding powdery mildew control for plants like lilac either solo or combined with another fungicide.

Source: B. Rao, Davey Tree. Causa Agent: Microsphaera syringae. Application intervals: Tourney (2 oz/A) - 14 days; others - 28 days. Applications initiated June 27.

#### SEE LABEL FOR COMPLETE DIRECTIONS FOR USE.
