TRACKING // ALERTS // GDD MODELS

#### BEST PRACTICES

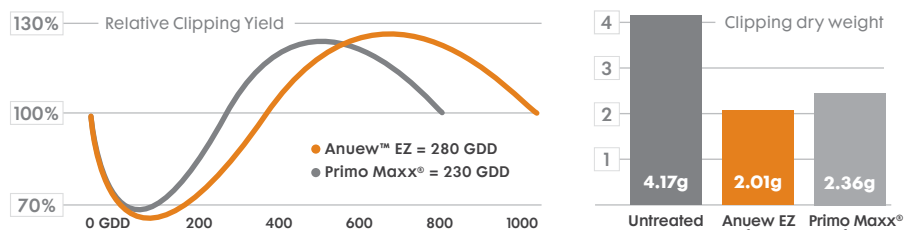

- Use enough volume to wet turfgrass without significant runoff.
- Do not irrigate or water treated areas within four hours of application.
- Include a non-ionic surfactant for improved coverage and performance consistency.
- Include 1 lb ammonium sulfate per pint (16 fl oz) of Anuew EZ if water source is hard (> 140ppm calcium).

## OUNCE FOR OUNCE, ANUEW EZ DELIVERS MORE

Even at lower use rates, Anuew™ EZ delivers longer control in cool-season turf – saving labor and dollars with less applications, less mowing and less clippings.

#### REGULATION THAT WORKS TO THE VERY LAST MOW

Anuew EZ doesn't give up early. Gain an average of two extra regulation days for consistent suppression, and fewer clippings, from day one to day 14.

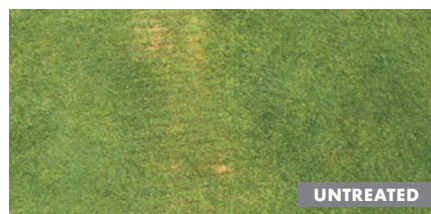

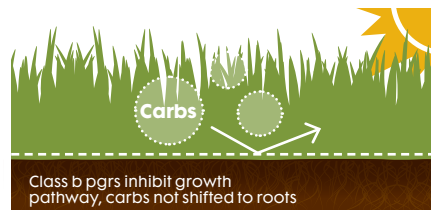

Clipping Yield: B. Kreuser, University of Nebraska-Lincoln, 2015, Creeping Bentgrass  
Clipping Weight: Dykema and Vargas, Michigan State University, 2014, Penncross Creeping Bentgrass, Applied 6/6; Results 6/19

#### IT DOESN'T END WITH GREENER BUDGETS, ANUEW EZ GREENS UP GRASS TOO

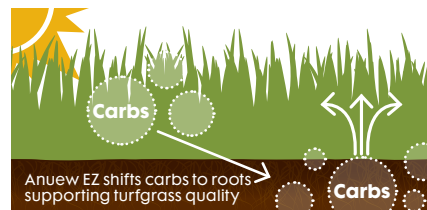

Unlike early-stage inhibitors, Anuew EZ shifts carbohydrates to the plant roots to visibly improve turfgrass quality, density and appearance.

##### EARLY-STAGE GA / CLASS B PGR

UNTREATED

##### LATE-STAGE GA / CLASS A PGR
