

Nufarm Weed Control Guide for Ornamentals

Herbicide options & application characteristics

PREEMERGENCE HERBICIDES ^{1,2}	UTILITY	WEEDS CONTROLLED	APPLICATION
SUREGUARD® EZ	Preemergence (PRE) control of broadleaves and grasses with limited postemergence (POST) control of emerged weeds	Broad spectrum control of weeds with months of PRE residual activity in the soil; POST control of small annual weeds	Make directed application to media, soil or mulch, avoiding contact with desirable plants. Cheetah® Pro is a great tankmix partner with SureGuard® EZ to control existing weeds and apply a lasting PRE barrier with 1 application
SUREGUARD® XTRA	PRE control of broadleaf weeds, grasses and kyllinga with limited POST control of emerged weeds	Broad spectrum control of weeds with up to 8 months of PRE residual activity in the soil; POST control of weeds up to 2" high	Apply to the soil surface prior to weed emerge – in dry conditions, adequate moisture is required for susceptible germinating weeds to be controlled
BROADSTAR™	A granular version of SureGuard® EZ – PRE control of broadleaves and grasses	Broad spectrum control of weeds with months of PRE residual activity in the soil	Apply PRE around or over the top of labeled plants with dry foliage so granules don't stick to foliage – remove any granules on desirable plants after application

POSTEMERGENCE HERBICIDES ^{1,2}	UTILITY	WEEDS CONTROLLED	APPLICATION
CHEETAH® PRO	Non-selective POST control of grasses, broadleaves, and sedges	Control of unwanted plants as a foliar application – little to no residual activity in the soil	Apply Cheetah® Pro on its own for cleanup of existing weeds and to maximize results, ensure good foliar coverage to weeds
CERTAINTY®	POST control of broadleaves and sedges	Excellent control of many sedges and broadleaves	Can be applied as a directed spray around or over the top of selected ornamentals, perennial ground covers, and warm season ornamental grasses listed on the label
PROSEDGE™	POST control of broadleaves and sedges	Specific control of sedges and other difficult weeds like field horsetail (<i>Equisetum arvense</i>)	Apply only directed applications around desired plants to control sedges and difficult to control weeds on the label
ENVOY PLUS®	POST control of perennial and annual grasses	Selective control of grassy weeds in broadleaf ornamentals	Can apply over the top of broadleaf plants like ground covers and shrubs to control perennial and annual grasses
CLEAN SLATE®	POST control of annual and perennial broadleaves	Selective control of difficult to control broadleaf weeds such as marestail, Canada thistle, and goldenrod	Apply as a directed spray or over the top of selected grass and broadleaf ornamentals for control of broadleaf weeds

¹ All listed herbicides are labelled for selected use in ornamentals.

² Read all labels thoroughly before applying over the top of desirable plants to ensure plant safety.
