

## Grassland – early spring agronomy solutions

### Control weeds in new sown leys

Protect your investment in leys sown last autumn or new leys about to be sown this spring by controlling competitive seedling weeds. Nufarm have some great solutions to deal with all the difficult weeds in many situations:

#### New Sown Grass only leys

For seedling docks, chickweed, fat hen, small nettle, charlock, runch and thistles

**Embutone 2.5 l/ha + Tomahawk 2 at 0.75 l/ha**

#### New Sown Grass + Clover leys

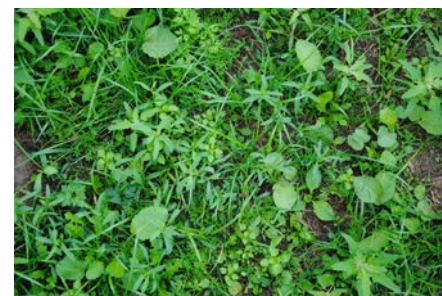

For seedling docks, Buttercup corn, Fat Hen, Pennycress, Plantain, Shepherd's Purse  
<2 leaf: Charlock, Flixweed, Fumitory, Knotgrass, Mustards, Nettle Small, Orache,

Pale Persicaria, Poppy, Redshank, Sowthistle

#### CloverMax 7.0 l/ha

##### CloverMax- KEY BENEFITS

- One of the very few products for weed control in newly seeded grass/clover leys
- Broad spectrum of annual and perennial weeds controlled
- Can be used in cereals under-sown with red or white clover

Apply the above mixes in 200 litres water/ha when weeds are actively growing.

Weeds should be at 2 – 6 leaf stage at application for optimum control.

Apply when grass has at least 4 leaves and has begun to tiller. Clover should have at least 1 trifoliate leaf

Clover may be checked following application but will normally recover fully
