

Cheetah®

NON-SELECTIVE HERBICIDE

FASTER WEED CONTROL, FEWER RESISTANCE ISSUES.

Cheetah® non-selective, post-emergence herbicide provides fast, effective control of the toughest broadleaf and grass weed challenges, including those resistant to glyphosate and multiple herbicide classes. Its unique mode of action works quickly to control undesirable plant vegetation in a wide range of labeled industrial use sites.

COMPETITIVE ADVANTAGES

- Fast non-selective control of challenging grass, sedge, and broadleaf weeds
- Excellent alternative to glyphosate for broad-spectrum weed control
- Reliable solution for managing existing or emerging herbicide resistance issues
- Tank-mix compatible with other non-selective and pre-emergence residual herbicides
- Advanced formulation with a caution signal word

CHEETAH COMPARISON TO GLYPHOSATE

	CHEETAH® Glufosinate-ammonium	GLYPHOSATE
SPEED	Chlorosis and wilting within 2 to 5 days	Chlorosis and wilting within 4 to 14 days
MODE OF ACTION	Inhibits glutamine synthetase	Inhibits EPSP synthase
RESISTANT WEED SPECIES	3	48*
AMS ADDITIVE	AMS 1.5 - 3.0 lbs/A	8.5 - 17 lbs/100 gal

While Cheetah (glufosinate-ammonium) and glyphosate are both non-selective herbicides, the active ingredients are different. Cheetah is a contact herbicide and thus requires greater coverage than glyphosate, which has systemic activity.

AT-A-GLANCE INFO

EPA REG. NO.	71368-112
ACTIVE INGR.	glufosinate ammonium (24.5%) (2.34 lb/gal)
FORMULATION	liquid
CHEM. FAMILY	phosphinic acid
GROUP NO.	10
REI	12 hours for agricultural uses, until spray has dried for non-agricultural uses
SIGNAL WORD	caution
PACKAGE SIZE	2.5 gal container (2 per case), 265 gal tote, bulk
APPLICATION	spray post emergence broadcast or directed

FASTER WEED CONTROL, FEWER RESISTANCE ISSUES.

KEY USES

Rights-of-way (railroad, utility, pipeline, and highway), airports, utility plants, ditch banks, tank farms, pumping stations, Conservation Reserve Program (CRP) areas, site preparation for conifer and hardwood production areas

KEY WEEDS CONTROLLED

(See product label for complete list)

More than 190 weeds including:

- Barley
- Barnyardgrass
- Bermudagrass*
- Black medic
- Chickweed
- Cocklebur
- Crabgrass
- Dandelion
- Fleabane
- Foxtail
- Geranium
- Goosegrass
- Groundsell
- Henbit
- Johnsongrass
- Knotweed
- Kochia
- Lambsquarters
- Marestail
- Morningglory
- Mustard
- Nightshade
- Pennycress
- Pigweed
- Ragweed
- Ryegrass
- Shepherd's-purse
- Sicklepods
- Spurge
- Starthistle
- Thistle
- Vetch
- Waterhemp*

*Not for use in California

USE SUMMARY FOR NON-CROPLAND SITES

SPOT OR DIRECT SPRAY APPLICATION: mix 0.5 to 2.0 fl. oz of Cheetah per gallon of water and apply 1 gallon of spray solution to 1,000 square feet to actively growing weeds. Larger weeds will require higher use rates (see table below).

BROADCAST APPLICATION: Apply 24 - 82 fl oz/A in ground equipment delivering 20 gpa or greater.

Additives: In addition to AMS, the use of nonionic surfactant at 0.25% or MSO at 1% may be used to aid control of difficult weeds.

WEED SIZE & STAGE	CHEETAH® USE RATES/GAL	CHEETAH® USE RATES/A
Easily controlled weeds <3 inches tall	0.5 fl oz	24 fl oz
Weeds < 3 inches tall	1.0 fl oz/A	48 fl oz/A
Weeds < 6 inches tall and pre-tiller grass	1.25 fl oz	56 fl oz/A
Weeds > 6 inches tall or tillered grass	1.25 to 2.0 fl oz	56 to 82 fl oz/A

MAXIMUM RATE – ANNUAL: DO NOT apply more than 164 fluid ounces of Cheetah per acre (3 lbs ai/A) in a 12 month period.

MAXIMUM RATE – SINGLE APPLICATION: Do not apply more than 82 fl oz/A per single application (1.5 lb ai/A/application).

MAXIMUM NUMBER OF APPLICATIONS PER YEAR: Do not make more than 2 applications at a maximum application rate of 82 fluid ounces per acre (1.5 lbs ai/A) per application.

MINIMUM RE-TREATMENT INTERVAL: 5 days.

APPLICATION PRECAUTIONS

- Uniform, thorough spray coverage is necessary to achieve consistent weed control
- Rainfast 4 hours after application to most weed species
- Weed control may be reduced if application is made when heavy dew, fog, and mist/rain are present or when weeds are under stress due to environmental conditions such as drought, cool temperatures, or extended periods of cloudiness
- Plants may be safely planted into treated areas after spray has dried
- If hard water is a concern, consider adding AMS at 1.5-3.0 lbs/A
- Do not apply Cheetah as an over-the-top broadcast spray to desirable conifer or hardwood plantings. Seedling conifer and hardwood trees may be planted into the treated area after the restricted entry interval (REI) of 12 hours has elapsed.

USE RESTRICTIONS

- Do not apply within any enclosed structure
- Do not apply as a broadcast application to ornamentals, or allow spray to contact or drift onto the foliage, green stems, exposed roots or fruit of desirable plants
